Can you imagine pouring turpentine on an open cut? This was the favorite way to prevent lockjaw some years ago. Naturally, we wouldn't think of doing this now. But then, we're lucky. We have tetanus toxoids and antitoxins. Thanks to medical science, lockjaw need no longer be a killer... previously, death occurred in 90% of the cases. Children, because of their affinity for cuts, sometimes pick up the tetanus germ. So, if there are young children in your family, be sure to ask your physician about preventive tetanus shots. It's *always* wise to seek your doctor's advice before using any medicines. And next time you have a prescription to be filled, think of us.
