scepatives. Mr. Betinne has made a heet a safer man to represent them.

as much good as it would otherwise have cussing the application of some few of the dance. It strikes me, that when the manure is applied as I have said, to well broken ground, that the majorrial properties is more than counter-balanced by the chading of the ground, which is the case

> In the mode of applying manures, we must be governed by, and must almatured or is it for permaneltly im say, broadcast and plow in as deep ly as can be done. In Morton's Cyclopedia of Agriculture we are told that "the deeper barnyard manure is buried the better." And in the Rurat Carolilany page 294, we are told that "the every circumstace;" and in speaking of those who advocate broadcasting as l have suggested, we find these words. ".f the perpetrators of such enormity be right, science is at fault, analysis is an illusion, and ammonitand all its kindred a family of impesters.

I recognize to some extent the soundness of the logic, but I am constrained to believe from actual experience, that if the application is sufficiently heavy to protect the soil from the blenching effects of the sur, then it is better so applied. for the reason, as I have previously effects more than counteract the results of the leaching.

Let us now consider another of our most commonly used fertilizers, and one as we should. I speak of cotton seed. Green cotton seed. The manurial qualities of this most valuable article, are overlooked by a great many, and instead of using them on the crop they are soid, and the proceeds from the saic are not even returned to the soil in the ahape of other fertilizers. In the application of cotton seed, as a fertilizer, it depends to a great degree upon the quantity that is to be used, as in the case of stable manures. I was once of the opinion that the discount on school checks cotton seed, for a fertilizer, should always he sown into the ground early in February, in order that they might not germinate, but of very recent years I have this community to a higher degree of cibeen convinced, almost against my own judgment, that they do most good when sown into the farrow the latter part of away over ten million trial bottles stable or barnyard manure, green cotton March or the 1st of April, ran over with of this great medicine; and have the satisfaction of knowing it has my judgement, the proper time to apply sufficient amount of dirt to make them absolutely cured thousands of it is before the cotion is planted, as early prout and get up—and just as they are hopeless cases. Asthms, Bron- in March as it is possible to do so; and pp. put in your seid potash in the proper proportions, run into this mass with a

Much more might be said upon this all important subject, of the application of manures to the cotton crops, but I ccession, only to begin the discussion. already known to be correct or incorrect.

In the application of all manures to the cotton crop, let us not forget the

The next meeting of the club but on the contrary, if the land be red stiff will be held on the 20th day of clay lands, then the manure should be put beneath the will as deep as possible and as practice big a symmetric of each of tend, and possibly they are right, that the beneates which has histly been when measure is used as a top droping the beneates which has histly been that it is to be the beneates and consequently down't be the beneates.
