## WINTHROP COLLEGE

ROCK HILL, S. C.

Tuesday, May 13th, 1913

### SPECIAL TRAINS

At 3:30 P. M. and 8:30 P. M. depicting the visit of Queen Elizabeth to Kenilworth Castle, with the elaborate festivities provided by the Earl of Leicester for the entertainment of the Great English Queen. Spectacular manoeuvres of mounted horsemen and picturesque representations of dances and sports of rural England in the Elizabethan Age. Seven hundred young women will take part in the performances. Presentation of the beautiful Robin Hood drama, "SHERWOOD", in the evening. Both performances in a beautiful out-door stadium on the college green. Reduced railroad rates with special trains returning in all directions after the evening performance.

Tickets For Both Performances \$1.50

For Reserve Seat Tickets address, WINTHROP COLLEGE, Rock Hill, S. C.

What is the difference between a most leaving at 4 a. m. and a pretty girl speeding an auto?

"Where are you going my Pretty Maid?" "To the quality market, Sir," she said. The maid in question was a pretty Lass, and bought only the Meats of the Quality Class. She's headed here.

Campbell Bros.

One is going pretty early, the other a pretty girlie going.

## SPEAKING OF CHANCE

By F. H. FERGUSON.

"It is a gamble," said Loomis, "and it might seem attractive to others. Not to me."

"Well, isn't everything a gamble, business or sport?" asked DeWitt. "You can't tell how you are coming out, no matter how careful you are about going in. The chance that stocks will go up or down is just the same as the chance that the ball will fall in the red or the black on the roulette wheel."

"Not the same," rejoined Loomis, "for full knowledge of the market and the holdings enables the operator to forecast ordinary fluctuations. There can be no forecast of a happening that is governed only by chance."

"May I suggest," interposed the professor, "that the analysis is destructive of both contentions. Mr. Loomis assumes that there are happenings 'governed' by chance. Perhaps if he will examine the phrase he will discover that it is paradoxical. Is what he calls chance governed by something?"

Loomis hesitated, and DeWitt laughed. "I think the professor agrees with my view."

"On the contrary," said the professor. "I believe there is no such thing as chance. More, I am willing to rest my belief on your experience. Have you ever known of an occurrence that ultimately proved to be utterly purposeless and out of time? Don't answer me too quickly. Let me tell you of a strange series of what my friend Loomis calls chances. The story has just come to me fairly complete."

"Nine years ago two children, brother and sister, were placed in a charitable institution in New York city. Their mother had died and left them unprovided for, their father had disappeared some time before. The boy was ten years old, the girl seven. After a year in the institution the boy ran away, and, strange to say, left the city and followed the railroad westward. It was in the summer and he made his way easily for fruit and plentiful and sleeping out of doors was not a hardship. He had many adventures along the road, but none worth mention until late in September, when he found himself in a little village in southern Michigan. His clothing had been worn to rags and he was beginning to be shy of town, fearing arrest and possibly a forced return to New York. But in Mattawan he saw a kind-faced woman who not only gave him a meal but a complete suit of clothes, and who talked to him with so much interest that he told her more of his story than he had confided to any other new acquaintance. He said that his parents were dead, that he was going to California, where the gold came from, and that he had made his way alone from Rochester. The woman tried to induce him to stay for a time with her, but he was afraid and got away as quickly as he could.

"He arrived in San Francisco Christmas week, by that time well inured to hardship but still self-reliant. His first meal in that city was earned the next morning selling papers, for he found not only instruction but help among the newsboys. For a long time he made no more than a bare living, but by the time of the fire he had begun to save. Three years ago, then fifteen years old, he realized that he needed an education more than anything else, and he began to attend night school. He kept his place on the street selling the morning papers, but in the afternoon gave it up to others while he went to his studies. Last November he learned of a place with an engineering firm here that would be open for him if he could prepare for it. To make it he would require at least six months at the university, and it seemed out of his reach. He needed \$200 to sustain him, for he would be obliged to give up his newspaper selling. Every plan he could think of presented the same necessity—More money—and he knew of no way to get it. Two days later he picked up a purse on the walk where he had stood so many mornings, and in the purse was \$600. It seemed like a direct answer to his wishes, but he wanted to be honest. The next morning he turned quickly but tremblingly to the 'lost and found' advertisements. What he hoped not to see was there, and two hours later he was on his way to the address given. To his knock the door opened and there, not recognized for a minute of curious surprise and struggling recollection, stood his sister, whom he had not seen for seven years.

"Her story was even more interesting than his. She had been chosen from among her many companions in the institution and adopted by a childless couple from Michigan, who had visited New York with this purpose in mind. A long time after she had become wanted to her new home she told her foster mother of her brother, who had run away three years before. With her description the kind-faced woman recalled the boy she had fed and clothed, and told the sister of the incident and the boy's expressed determination to go to California. Then came from the charitable institution a message and a bequest. The father of the children had traced them so far, but had died before he could join the daughter. He had left her \$600. With this small fortune the girl could think of nothing but a journey to California in search of her brother. She came and found him by losing her purse.

"Now, gentlemen, will you call these related happenings mere chance? As Mr. Loomis said, 'Not to me.' In a universe governed by law there can be

## POULTRY

### COMBAT POULTRY YARD FOES

Some Essential Measures Outlined by Expert Poultrymen for Control of Insect Parasites.

Insect parasites are the cause of a great deal of annoyance and loss to poultrymen. Some essential measures as outlined by George M. Turpin for their control are:

Have the poultry houses separated from all other farm buildings.

Have all the interior fixtures of the poultry houses, such as roost-poles, nest boxes, feed hoppers, dropping boards, etc., removed so that every part of the interior can be readily cleaned and sprayed.

Keep a good dust bath to which the fowls may have access at all times of the day. Common road dust with fine ashes and powdered sulphur or air-slacked lime added is excellent. The road dust should be gathered during dry weather for use during the winter.

Spray the coops and fixtures with a good whitewash twice each year, adding two pounds of salt and one-fourth gallon of crude carbolic acid to every 50 gallons of the spraying mixture.

Setting hens should have access to a good dust bath such as mentioned above. If lice are found later on the chicks, rub lard in the feathers of the head and throat, and in bad cases also under the wings.

### SHIPMENT OF BABY CHICKS

Little Fellows May Be Sent Long Distances by Express Without Danger or Discomfort.

One of the most interesting branches of the poultry business is the shipping of baby chicks hundreds, even thousands, of miles, and yet have them arrive in good condition for further growth and development. By shipping direct from the incubator when the chicks are one day old, advantage is taken of that period in the life of the chicks when nature intended that they should be without food, and they can therefore without injury or discomfort be sent long distances by express under any conditions of climate.

Chicks when first hatched require neither food or drink. Indeed, such is harmful. During the first seventy-two hours the chick's life is sustained by the assimilation of the yolk, for the embryo chick is developed from the white of the egg, and just before hatching the yolk is drawn up into its system and furnishes all the food any chick should have for the first three days of its life. It is during this period that chicks can be shipped as far as express can take them.

### KEEPING RATS FROM POULTRY

By Inverting Tin Bucket on Posts Supporting House Rodents May Be Kept Away.

If there are many rats in your vicinity it will pay you to make it impossible for them to enter your poultry house. Put a post in the ground for every corner of the house, says a writer in the Iowa Homestead. Invert

Rat-Proof Hen House.

over the top of the post an old three-gallon tin bucket. Set your house on these posts and when Mr. Rat attempts to climb a post and go into the poultry house he simply goes up inside the bucket and does not accomplish his purpose.

### HEN MANURE AS FERTILIZER

Has Greater Value Than Any Other Kind Used on Farm—Should Be Well Taken Care Of.

Hen manure as a fertilizer has greater value than any other fertilizer on the farm. It is generally supposed by some poultrymen that the manure will pay for taking care of the hens, but this depends much on how it is kept. The dropping boards under the roosts should be kept covered with some absorbent to preserve the strength of the droppings.

Land plaster or South Carolina rock is good. Never use wood ashes or lime with the poultry droppings. The ammonia or nitrogen would be set free, and part of the value of the fertilizer lost. The droppings should not be applied on a growing crop, or covered soil. Use it on corn by putting a handful on each hill at the time of last hoeing. It should be kept under cover until used.

**Killing a Turkey.**  
The proper way to kill a turkey is to tie its feet together, hang on a pole, then cut the throat and allow to bleed freely. Dry pick, leaving head and wings on. After picking, dip in hot water and then in cold. This will
