**SPREAD OF BOLL WEEVIL.**  
Spread Was Abnormally Great During Past August.

Washington, Sept. 30.—Under normal conditions the boll weevil advances into new territory at the rate of about 50 miles each year, but during a period of only two weeks during the present season there was an advance of about 300 miles. This movement carried the insect into Georgia for the first time, and 25 counties in that state became infested. Several counties in Florida have been infested for several years but 8 additional ones became infested by the same movement. Twenty additional counties in Alabama were also invaded. All of this spread took place between the 15th and 31st of August.

There were several conditions according to the entomologists of the United States Department of Agriculture, that contributed to this unusual dispersion. One of them was the drought in Alabama and Mississippi, which caused the plants to cease fruit-

ing and depriving the weevils of the squares upon which they prefer to feed. The more important condition, however, was a series of very high winds which began on August 15 and blew continuously for several days toward the northeast. The weevils were thus carried much farther than they would have gone by natural flights or even by the aid of ordinary winds.

The department has placed all available forces at work to assist the farmers in the territory that has just become infested. Most of the cotton is now open and this will allow an unusually early picking so that the fall broods of the weevil can be destroyed by uprooting and burying the plants or burning them where necessary. The department strongly urges the burying of the plants wherever this can be done promptly, as the humus thereby placed in the soil is of very great importance. The state agencies are co-operating with the agents of the department, and a very active effort will be made to reduce the number of weevils to the extent that will allow an approximately normal crop to be produced next season.

Another feature of the boll weevil problem which is attracting considerable attention is the damage that is being done in Texas this season. There is a more or less general impression in the eastern part of the cotton belt that the boll weevil has died out in the State of Texas, but the investigations of the department show that the abundance of the insect in that region depends on climatic conditions. During the present season these conditions have been extremely favorable with the result that the insect has been as abundant as at any time since it invaded the state. The lesson to be drawn from this fact is that the planters in the eastern part of the cotton belt must make a strenuous fight, and should realize that since the boll weevil has not died out either in Texas or Mexico, it is not at all likely to do so in any other region that may be the result that the insect has not been their systems of farming to boll weevil conditions without delay.

**Honor Roll Lugoff School.**

The following is the roll of honor for the Lugoff School taught by Miss Mabel E. Schmetzer and Miss Daisey Varn for the school month just ending:

First grade—Jemel Rabon, Mary Mickle, Evelyn Ward, Chalmers White, Jack Wilson, Mattie Rabon.

Second grade—John Lee, James McCaa, Algie Bateman, Lois Truesdell, William Hammond.

Third grade—Margaret Gardner, Alida Bateman, Allie Ammons, Victor Ward, Buddie Ben Team, Boykin Rosborough.

**Take No Useless Risks.**

Do not take chances with cotton anthracnose. It is one of the worst diseases that can get in your cotton field. If you see some disease in your cotton and you are not certain as to whether it is anthracnose, send a sample at once to your county demonstration agent or to the botany division of Clemson College.

**Old General Prosperity.**

(With Apologies to James Whitcomb Riley.)

Old General Prosperity's come to our town to stay; the local merchants all are glad, now trade has come their way; there was a time when money vanished from us like a fog; "Enclosed find check, for which please send ..... as per your catalogue." We had the same goods right at home; our prices, too, were right, but somehow no one understood, and no one saw 'he light; out-of-town concerns had methods that we didn't know about — the mail order firms'll git you, ef you don't watch out.

Once we had a citizen who wasn't very wise; he kept the General Store, but he was too proud to advertise. His groceries and dry goods, an' his eggs and butter, too, his hardware an' his boots and shoes were good; but no one knew; and so we spent our money where it didn't help a bit to make the town a better one; to make us proud of it; the big city got the profit, and we—what were we about? The mail order firms'll git you, ef you don't watch out.

This citizen at last woke up and advertised his goods, an' all the others followed suit, and came out of the woods, an' they helped their home town paper which had thus done its share to boost the town and help to put it on the map somewhere. An' the paper it helped them in turn, an' people came to buy, an' found that money spent at home makes old Depression fly, and unless this mutual spirit kinda hovers all about, the mail order firms'll git YOU, ef you don't watch out.

Cleveland, O.—"Enclosed find 50 cents for a bed sheet which I took from your house when I roomed with you." read a note received by Mrs. M. Holzman. The signer of the note roomed at the Holzman home eight years ago.

**VITAL STATISTICS.**  
Number of Deaths and Births Registered for Past Month.

**Births DeKalb Township**

**CLEMSON EGG MASH**  
Mixture of Cottonseed Meal and Grain Will Produce Winter Eggs.

Clemson College, Oct. 5.—It is more than a year since the Clemson Egg Mash was given to South Carolina farmers by the poultry husbandman of Clemson College. In that time it has increased steadily in popularity and those who have used it have reported the most satisfactory results. With the approach of winter, farmers are reminded that it requires plenty of good feed to make hens lay in cold weather. It is believed that they can find nothing better for this purpose than the Clemson Egg Mash and the formula for the mash is again brought to their attention.

Cottonseed meal 100 lbs; Cornmeal 50 lbs; Ground oats 50 lbs; Wheat bran 50 lbs; Wheat shorts 50 lbs; Ground lime rock (fertilizer lime) 10 lbs; Ground charcoal 12 lbs; Salt 2 lbs.

Keep this mash in the poultry house before the hens all the time. Use a covered box with slats around it, or a hopper, so that the hens cannot soil or waste the mash. Do not mix it with water and feed only once a day, as in that case the hens would overfeed and then stand about and get chilled. When the mash is fed dry the hens consume it gradually as nature intended. The ground lime rock is fertilizer lime, not the burnt lime used in whitewashing. The ground charcoal may be left out of it cannot be readily obtained, but always add the salt.

**Miss Eva Hite Resigns.**

For personal reasons, Miss Eva Hite, president of the South Carolina School Improvement Association, has resigned to accept the Bethcar school, in Alken county.

Since her election to this position in March, 1913, Miss Hite has exerted a remarkable influence, for rural school betterment. Under her leadership school improvement associations became a vital factor for the promotion of local taxes, consolidation, compulsory attendance, efficient teaching, and the finest form of community co-operation.

Miss Hite is succeeded by Miss Elizabeth Dickson, of Darlington county, who entered upon her work in the office of the State superintendent of Education on October 1.

**Agricultural Lime or Phospho Land Plaster**

**Our Only Available Substitute For Potash**

The analysis shows that PHOSPHO LAND PLASTER or Gypsum is higher in sulphate of lime by from 5 to 10 per cent, than most other brands. The analysis of sample made by Sheppard Laboratory, Charleston, S. C., shows **SULPHATE OF LIME 82.93 PER CENT.**

**USE PHOSPHO LAND PLASTER** FOR COW PEAS AS TOP DRESSING FOR GRASS AS FERTILIZER FOR CORN OR COTTON. AS FERTILIZER FOR OATS

**It Is Used On Manure Heaps to Prevent The Escape of Ammonia**

PHOSPHO LAND PLASTER is being bought by some fertilizer manufacturers and used as a filler in order to make their ammoniates less soluble. No man can make a crop without some form of ammonia. When you buy your Fertilizer you buy water soluble, paying for it on a basis of its unit value. For instance, Nitrate of Soda has 18 units of ammonia, all of which is soluble in water. A big rain just after this application will probably leach out one half of your nitrate unless it is fixed. Let us insure your crop for you with an application of Phospho Land Plaster.

The government, in Bulletin 77, "Liming of Soils," page 7, says that "Sulphate of Lime Plaster acts on the insoluble potash in the soils changing them to soluble potash, making them available for the plant." Use it separate or in connection with your commercial fertilizer in place of potash.

The plants to which this fertilizer is best suited are Corn, Oats, Cotton, Clover, Potatoes, Peanuts, Peas, Beans and Cabbage.

The price is so reasonable that any farmer can afford to use it.

Sulphate of Lime, Gypsum or Land Plaster does not liberate ammonia, it conserves, or fixes, releasing same as the plant requires this particular food. You can readily see the superior virtues of Land Plaster or Sulphate of Lime over Carbonate of Lime. For a practical illustration, call on the undersigned. Write for prices and further information to
