

# Children Cry for Fletcher's **CASTORIA**

The Kind You Have Always Bought, and which has been in use for over thirty years, has borne the signature of and has been made under his personal supervision since its infancy.

*Chas. H. Fletcher*  
All no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

## What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought

THE CENTAUR COMPANY, NEW YORK CITY.

### Huge Mortars Among Shrubbery.

New York, March 7.—Huge mortars, standing on concrete emplacements and abundantly supplied with half-ton projectiles, were erected during the war among the flowers and shrubbery of private gardens in New York city and elsewhere along the Atlantic coast, ready to repel the attacks of German naval or air ships, Maximilian Toch, one of the first American camoufleurs, told the New York section of the American Chemical society tonight.

Mr. Toch, who directed several of the navy's important camoufleur projects, spoke with the consent of Secretary Daniels. He described how honeysuckle, morning glory and ivy, as well as paints, had been employed to conceal or lower the visibility of coastal fortifications.

Ambrose channel, the mouth of New York harbor, was protected, in addition to the guns in the regular army forts, by mortars having a range of 12 miles, said Mr. Toch. Some of these auxiliary cannon, he declared, were placed two and a half miles inland on private estates and so concealed by arrangement of trees, shrubbery and flowers that passers-by were ignorant of their erection and even aviators found "little or no evidence" of their location. They were manned by army gun crews.

The camoufleur described his work in disguising navy yards and docks along the Atlantic, notably the Pensacola and Key West bases, which were exposed to attacks by German raiders and submarines operating in the south Atlantic. The navy believed, Mr. Toch asserted, that the Germans had a secret base on the north coast of Cuba, adding that "rich German firms in Havana were notoriously aiding the central powers" and that there were "more German spies and propagandists on the island than in the United States."

Mr. Toch declared the army "did not take kindly to camoufleur at the beginning of the war," and said that he had great difficulty in convincing army officers of the necessity of camoufleur fortifications adjacent to navy yards.

Miss Januita Wylie has returned home after spending some time in Camden—Lancaster News.

### Where are My Reading Glasses?

Mischievous daughter has picked Daddy's pocket and watches him gleefully as he searches in vain for his reading glasses.

If Daddy wore Kryptok glasses, he would be freed from the "off-and-on nuisance of the two-pairs-of-glasses bother, because Kryptoks (pronounced Crip-tocks) would give him, in one pair of glasses, the necessary correction for both reading and distance.

## LAYING AWAY THE BUGS.

### Control Measures For Orchard And Garden.

Clemson College.—Within the next month the orchard trees will probably be in the proper stage for the spring sprayings to control worms. Arsenate of Lead should be purchased as soon as possible and should not be put off until the day the spraying should be done. Everyone who expects to have fruit without worms this summer should consider the purchasing of spray materials for the spring and summer sprayings as an obligation not to be neglected. The first spraying of peaches for worms should be done when the petals have fallen and most of the shucks slipped, which is about ten days after full bloom. The spraying of apples should be immediately after all petals have fallen and before the calyx closes.

In a mixed orchard where there are various types and ages of apple trees, two sprayings will be necessary, as all the trees will not be blooming at the same time. Spray part of the trees when enough of the petals have fallen, and the rest within a week or ten days.

What is Needed for Spring Sprayings. For each fifty-gallon barrel of spray solution, one pound of arsenate of lead powder and two pounds of un-slaked lime. In estimating the materials needed, the following schedule of amount of spray required on trees should be used:

- 60 very young peach or apple trees per barrel.
- 35 peach trees in full bearing per barrel.
- 35 apple trees in full bearing per barrel.
- 20 large old-fashioned apple trees per barrel.

Write for Circular Number 25 for directions for the spring and summer sprayings.

Apple Lice: Apple trees when the leaves begin to grow are very frequently attacked by lice or aphids. The young leaves curl and the tree's growth is checked by the lice sucking the plant juices. The fruit yield is reduced and the fruit will be deformed and poorly developed—and this also assists in spreading diseases. For Control: Begin just as soon as the lice are noticed on the tender young leaves and when the leaves begin to curl and turn yellow. Spray with nicotine sulfate (also known as Black Leaf 40), diluted at the rate of about 1 teaspoonful to 1 gallon of water, or about 1/4 coffee-cup full to 50 gallons of water. The nicotine can be mixed with the arsenate of lead spray and be put on at the same time. Write for bulletins on the Apple Lice.

Garden Insects for March and April. Among the spring garden insects which usually require attention during March and April are the potato beetle or bug, the cabbage worm, and the cabbage lice. Very little trouble should be experienced in controlling these pests. The main point in the control is to watch the plants closely, and on the first appearance of these pests, start controlling them.

To Control the Potato Bug or Beetle.—The most convenient and efficient method is to dust the plants with arsenate of lead powder or cal-arsenate. Of course the plants can be sprayed with a solution of these poisons with the same results. But the dusting method is cheaper and more easily done. Mix the poison thoroughly with air-slaked lime in the proportion of about half and half. A small flour sack or a muslin or cheese-cloth bag can be used to advantage to shake the poison on the plants. Do this in early morning when the dew is on the plants for best results. Do not let the bag become wet by touching the wet plants.

To Control the Cabbage Worm.—Use the same control measures for the cabbage worm as for the potato beetle. The prejudice that some have against poisoning cabbage is unfounded. Experiments show that a person would have to eat 23 cabbages at one time, if dusted in the ordinary way, to receive any poisoning effects. Begin to dust the cabbage with either of the two poisons mentioned for the control of the potato bug, when the worm holes are first noticed, and continue this as long as necessary.

Cabbage Lice.—A small grayish, or greenish louse, which causes the plant to wilt and die by sucking.

The cabbage louse gives birth to living young throughout the summer months, by the millions. During the fall there is a generation of female lice which lay eggs. The winter is passed in the egg stage.

Control: 1. Spray with nicotine sulfate or Black Leaf 40—1 pint to 100 gallons water, or 1 tablespoon to 6 gallons water.

2. Spray with soap solution: 1 lb. of ordinary laundry soap in 2 gallons of hot water. Shave the soap in thin pieces before heating. Dilute the 2 gallons of hot mixture to 4 gallons by adding 2 gallons of cold water.

If Black Leaf 40 cannot be obtained from local dealers, the nearest market is The Kentucky Tobacco Products Co., Louisville, Ky. Price of material, \$1.25 per 1 pint.

Fall plowing or spading in the garden will kill many insects and bugs that would otherwise pester you next season.

### STRONG FOR CIVILIZED GARB

Sartorial Variety Seems to Be Chief Aim of Na. of Villages of...desia.

Although we have not thought the people of Africa to be much concerned about clothes and fashions, yet styles, such as they are, have entered the villages of the dark continent and are beginning to cause the people much anxiety. Miss Pearl Mulliken, Methodist missionary to Rhodesia, writes of the African dress as seen in a day school, according to the Centenary Bulletin.

"Many of the pupils, who range from the kindergarten age to grandparents, are dressed in store clothes. Their store clothes, however, have largely lost their identity beneath a covering of many colored patches. Weather has nothing to do with clothes in this part of Africa. It may be a real summer day and you are wondering how you can keep cool, but not so these boys who have been to town to work and have clothes to exhibit to their less fortunate brothers. If these riches consist of somebody's castoff overcoat he is sure to have it on and perhaps a bath towel around his neck, while most of the small boys are content with a yard of unbleached cotton for their entire outfit. But sometimes the big boys are quite generous with their little brothers and divide with them; such is the case of one little fellow who is the proud possessor of a vest which about covers him. Two or three others wear their big brother's shirts, which is quite sufficient for all purposes.

"Some of the girls are dressed principally in beads, brass bracelets and anklets; while others have cloth draped around them forming a skirt and they are without a waist. One girl wears a pink silk waist with a dirty calico skirt. They often appear in evening dresses, the cast-off finery of the town women, and they may be seen digging in their gardens with these on. One came to school draped in a white bedspread."

Styles in names changing as well as in clothing. The following are some of the names which the African mothers have given their children: Spoon, Saucapan, Hotel, Pumpkin, Gingerbeer, Cigarette, Shilling, Sixpence, Penny, Coffee, Sweet Pudding, Very Nice, Office, Tomato, Fifteen, Vinegar, Sugar.

### Uncle Sam Beneficiary.

Members of the American Flint Glass Workers' union, assembled in Memorial hall, Toledo, were told an inspiring story of patriotic devotion by a member of their union at the unfurling of a service flag, with 866 stars, representing union men in the army.

After an introductory speech, in which John J. Quinnivan, business agent of the Toledo Central Labor union, told of the determination of the unions to back the government, President William P. Clarke described the heroic death of Charles H. McCarthy, who sacrificed his own life in France for the sake of a friend.

Not only had McCarthy, a former member of the Glass Workers' union, died heroically, but he had lived patriotically. Mr. Clarke said, for in taking out \$10,000 insurance when he entered the army, he asked that the sum be made payable to the United States government.

### Saving Man-Power.

One of the recent devices designed to save man labor is the slab-handling storage battery truck, which is employed at the plant of a steel company in Cleveland to haul heavy pieces of steel from the storage yard to the heating furnaces, says Popular Science Monthly. The distance approximates 500 feet. Before electricity was substituted for man-power the slabs were loaded on hand trucks.

The new truck is similar to the elevating platform truck, except that for its elevating mechanism a tilting platform is provided. This platform is secured to the rear axle by a pivot, being operated by a horizontal ram. By manipulating the ram the platform is moved toward a vertical position and its front edges are lowered.

### Gentle Germans Quite Insulted.

Mr. E. J. Riggs writes this short but pointed letter to the New York Sun about German squealing: "On reading in the Sun that German newspapers are indignant because American soldiers are using shotguns, I was reminded of a 'card shark' in Leadville in '79. He had held out a big hand for a killing and had it stuck in the top of his boot. Finally he got his bank roll into a big pot and reached for his holdout to switch in, but found it gone. 'Hold on!' he yelled; 'I ain't going to play in this game—there's cheating going on.'"

### Looking Far Ahead.

A wife, whose husband is on active service, recently presented him with a bouncing baby boy. She wrote to ask him when he should get leave, and also when the war would be over. His reply was as follows:

"Dear Lucy—I don't know when I shall get leave or when the war will be over, but if the baby should be called up before I get leave, give him a parcel to bring out to me.—Your loving husband, Bill."—London Tit Bits.

### Giving Rooster Its Due.

On my way to the railroad station with Victor, with whose parents I was spending my vacation, I remarked that he had lovely hair. Whereupon he said: "Y-s, but our rooster has a better comb than I have hair."—Chicago Tribune.

## No Wasting of Bar Soap

**5c** and Larger Packages

NO—decidedly no, when GRANDMA is around. No bar soap lying in waterwasting away. No chipping, slicing or shaving off more than you need. GRANDMA is a wonderful soap—and it is Powdered. That's the big secret. You just measure out what you need, no more. Sprinkle it in the tub and presto—just like magic, millions of glorious, cleansing suds in an instant. Then, the whitest, cleanest, freshest clothes that ever hung on a wash line.

Try this Powdered Soap Today!
