The hotter the day, the better you'll like it.

Bludwine

MAKES YOU GLAD YOU'RE HERE

The Summer's best beverage

Delightfully cool and refreshing—and a really healthful beverage.

Authorities agree that Bludwine contains vitamins. These principles are indispensable constituents of food and are found in grains and fruits. They are, however, lacking in white breads, canned goods and polished grains. Bludwine, prepared from fruits and grains, supplies them.

The Bludwine formula is never protected and guaranteed by Bludwine Company, Athens, Ga.

SIMPLE MATTER TO EXPLAIN

As It Happened, However, It Was Rather Embarrassing to One Idle Student.

Professor Gurney was one of the most genial instructors and the most skillful disciplinarians. As a teacher Gurney was always kind and courteous, but nevertheless a terror to drones and evildoers.

For example, take the case of a student who was afterward a distinguished professor in the medical school. We were reading Cicero's Epistles. In the lesson for the day he was describing a scene in court, when it was evident that in the morning before the witnesses came in they had been suborned and instructed what to testify. I will call the student Drake. He had not looked at his lesson, and when called upon began to translate until he came to this passage.

He could make nothing of it, but looked up with a helpless air and said, "I don't think I understand this passage." Gurney bowed, and with the utmost suavity said: "It means, Mr. Drake, that they had learned their lesson before they came in in the morning."

As that was exactly what it did mean, the fellows set up a shout and Drake dropped into his seat.—Harvard Graduates' Magazine.

DETERMINED TO ENJOY MEAL

Ten-Year-Old Was Going to Eat in Comfort if It Cost Him His Savings.

The Lane family decided to help out the mother of the family by decreasing the amount of table linen in the weekly washing. Each member who spilled something on the cloth was required to cover it with a piece of money—of the exact size of the spot. Twice ten-year-old Fred was compelled to hand in a quarter from his paper money. Then one day he came home from the store with his pocket jingling full of money.

At the very beginning of the meal he dropped a bit of gravy. Soon afterward a piece of tomato followed the gravy. Still he showed no concern. His older sister reminded him of the agreement. "Oh, I guess I'll wait until I'm through," was his calm rejoinder.

Every one was surprised because on other occasions he had showed much concern over his accidents. But when he produced a pocketful of pennies at the close of the meal and announced that he had come prepared to enjoy a meal once again, everyone understood.—Indianapolis News.

Germs Pressed to Death.

The Nebraska State Journal observes one of the most interesting of recent developments in the dairy industry is the announcement that germs may be killed by pressure. This leads to the belief that the old method of pasteurizing milk by heat, which has been found objectionable in some respects, may be supplanted. It is claimed for the pressure system that the delicate ferments or enzymes in milk are not destroyed and that no changes are made in the taste or general condition. The pressure is applied by means of a hydraulic pump. It is possible to apply as high a pressure as 100,000 pounds to the square inch. A pressure of 35,000 pounds to the square inch for 15 minutes has been found to kill many bacteria. Higher pressure can be supplied when the germs are extraordinarily stubborn. In general, it is believed that a pressure of 30,000 pounds for 20 minutes will serve every practical purpose. This material is found in a statement recently issued by the American Chemical society. Coming from such a source it will be accepted as authoritative as well as interesting.

Paper Clothing.

Underclothing made of finely crimped or grained paper is now being manufactured in Japan. After the paper has been cut to a pattern, the different parts are sewed together and hemmed, and the places where buttonholes are to be formed are strengthened with calico or linen.

The paper is very strong and at the same time very flexible. After a garment has been worn a few hours it will interfere with the perspiration of the body no more than do garments made of cotton fabric. The paper is not sized, nor is it impermeable. After becoming wet the paper is difficult to tear.

New Warships Are Powerful.

Our latest dreadnaughts—Iowa and Massachusetts—mark a great advance in size and power over any previous warships. Their length will be 384 feet, their breadth 106 feet, and their main draft will be 33 feet. The motive power will be similar to that of the Mexico, that is to say they will have the electric drive. The maximum speed will be 23 knots and they will have a cruising radius of 8,000 miles. Their displacement will reach the unprecedented figure of 42,200 tons. The armament will consist of 12 16-inch guns and 16 six-inch guns.

America's Store of Radium.

The total production of radium element in the United States up to this year is estimated at 35 grams. It was first produced in 1913, in which year 2.1 grams resulted; in 1918 the product was 13.6 grams. Charles H. Viola, writing in Science, estimates that the earth's holdings of the Standard Chemical company should produce at least 500 grams radium.

Program of Convention.

The following is the program of the forty-first annual Kershaw County Sunday School Convention to be held with Mt. Pisgah Sunday School, Sunday, September 7, 1919:
 Convention Keyword, "Victory."

"NOW I CAN SEE BOTH NEAR AND FAR WITH ONE PAIR OF GLASSES."

"The little rogue 'picked' my pocket! Yes, hid my reading glasses behind her and gleefully watched me fumble and search for them. How well I remember it! It made me realize how inconvenient it was to fuss with two pairs of glasses—out for reading, the other for distance—and caused me to invest in KRYPTOKS, which combine near and far vision in a single pair."
