

An Englishman plans to change the shape of horns of cattle by hanging weights that he has invented on them while they are grazing.

Prior to the discovery that cottonseed could be made to yield a plentiful supply of oil, millions of pounds of seed were destroyed or left to decay in heaps.

Service and Quality

We established our business on the principle of being fair with our customers, giving them full value for the money they leave with us.

We have continued that policy throughout the years we have been serving you, and we are pursuing it more persistently than ever in this era of price inflation today. But we never lower the standard of our goods.

On this high plane of commerciality we solicit your patronage.

The Most Beautiful Car in America

A New Development in Light Sixes

Before we began experimental work on our new six-cylinder motor three years ago, we made a very thorough investigation of the light six field.

We found out just what qualities car owners desired in the power plants of their motor cars and then we designed an engine to meet these requirements.

The wisdom of our method is attested by the unanimous approval given our five-passenger "Glenbrook" model. With its first appearance, it immediately won the enthusiastic support of motorists.

And, by its dependable and economical performance, it has so clearly demonstrated its high character as an investment value that our production schedule is already proving unequal to the demand.

The "Glenbrook" is a truly remarkable development in five-passenger cars. Won't you arrange for a demonstration while our dealer is in position to meet your requirements as to delivery?

SATISFIED WITH DOG'S MEAL

Westerner in New York Proved He Knew a Good Thing When He Saw It.

A man and wife moved to New York from the West—a sane, conservative American man and wife, used to money and knowing the worth of it—and brought the family dog along, paying \$5 extra fare for the dog, by the way, on the train. They went to a large and gorgeous hotel and in the due course of time the dog needed sustenance.

"Ring for a waiter," said the husband, "and we'll get the dog some scraps."

The floor waiter came and when asked to bring some food for the dog explained with some hauteur that he was the floor waiter and not the dog waiter, but would inform the dog waiter of the desires of the dog. The dog waiter arrived in course of time and the predicament of the dog was explained to him. The dog waiter wrote down the order carefully and departed. Presently he returned bearing a silver tray on which were displayed daintily various articles of food—some vegetables, some meat and a cracker or two.

"What's that?" asked the husband, examining the contents of the tray with interest.

"The service for the dog, sir," the waiter replied.

"How much is it?"

"One dollar, sir."

The husband took the tray.

"Get the dog a bone," he said. "I'll eat this. It's the best-looking meal I have seen in the place, and the cheapest."—Samuel G. Blythe, in Saturday Evening Post.

KNIFE ENDED ALL SQUAWKING

Pets of Clemenceau No Longer Created Disturbance, After Undergoing a Slight Operation.

M. Clemenceau's love of pets, of which much has appeared in the press since his recent visit to London, once involved him in trouble with his neighbors. Twelve years ago, during his first term as premier, he had a number of peacocks and storks installed in the gardens attached to the ministry of the interior. There are no trees in these gardens, only lawn and flower beds, which in M. Clemenceau's opinion lack animation—hence the peacocks. But other people living in the Place Beauvau complained that these birds were too animated, their cries being so persistent as to render sleep impossible.

Things reached such a pass that the prefect of police was asked to indict his official superior for disturbing the peace of his neighbors, who were all the more indignant because M. Clemenceau went home every night to sleep at his flat in the Rue Franklin, far out of the range of the peacocks' cries. However a scandal was averted by the premier allowing a slight operation to be performed on the vocal chords of his pets, which, without otherwise injuring them, rendered them incapable of squawking.

And Still Eggs Are High!

The hens need a walking delegate. Grinding the beaks of the poor unprotected fowls seems to be the modern poultterer's long suit. Witness the modern working day of an unhappy hen on an up-to-date chicken farm, where as many as 18,000 eggs are hatched at one time.

Electric light has done it. The lights burn steadily until 10 p. m. At 4 a. m. they are turned on gradually until their full glare wakes the hens. The poultry then sit up and rub their eyes and think, "How short the nights are getting! Yet it's certainly daylight. Well—just one darned day after another!" Nights are short. The touching innocence of the hen victimizes it to the extent of getting only six hours' sleep a night. Eight-hour day? Why, the chicken works as long as the farmer!—The Nation's Business.

Stopped Anyway.

While motoring with four girls my clutch got out of order and it was necessary for the girls to get out and push in order to get the car in motion. On the way back it was arranged that when we got to the home of the girl where they were all staying they would jump off while the car was moving slowly, thus to prevent my stopping and being stalled again. Imagine my horror when they all jumped off backwards and falling over in a bunch rolled into the ditch. I surely had quite a time explaining my seemingly ungentlemanly act to the girls' parents, who had witnessed the incident from the porch.—Exchange.

Brazil Seeks Experts.

According to advice from Commercial Attaché J. E. Phillips, at Rio de Janeiro, the government of the state of Minas Geraes, Brazil, has sent to the United States to contract for the services of an expert in the cultivation and production of cotton; two experts in fruit culture, including vineyards; three grain experts, one expert in tobacco culture, two live stock experts, including one veterinarian, and one dairy expert. These men will be employed as traveling teachers in the interior districts of the state of Minas Geraes.

Progress in Burma.

There are five schools for the blind in Burma, one at Yangon and one in Moulmein. The former, which before people of that region are girls, now enjoys the services of a blind Oxford graduate.

Duck Had Addressed Tag on Her.

Tomasville, Ga.—Mr. Wilbur Huff of Macon shot down a female Mallard duck at the lake on the thirtieth of January and broke one of the wings of the bird. He found on examination that it contained a tag on which was engraved "Write to Box 48, Kingsville, Ontario, No. 18."

Mr. Huff turned the duck over to Mr. H. W. Hopkins, Jr., who has it on Judge Hopkins' plantation near the lake with others of the same variety that he has secured for breeding purposes.

This duck came from the north country with millions of others during the winter months and is probably one of a number that were marked from Ontario so that reports may be had as to the distance they travel, their feeding grounds for the winter and other facts that are interesting to the student of migratory bird habits. Mr. Hopkins has written to the original owner regarding the fact of the capture.

See Mary Pickford in "Pollyanna" at the Majestic today. Matinee and night.—adv

Card of Thanks.

We desire to extend our heartfelt thanks to the many dear friends for the kind services rendered us during the illness and death of our dear daughter and sister.

98% Metal.

A Maxwell is 98% metal, and the very best metal that metallurgists can specify. Pound for pound it equals the metal in any car built.

The Maxwell is made of light-weight but strong metals.

They had to be light because the mission of the Maxwell is economical transportation.

They had to be strong because the Maxwell is built to carry just as heavy a passenger load over the same roads and at the same speed as any car, despite its price or size.

Any engineer will tell you that in getting that rare combination of strength with lightness high prices must be paid for the metals.

Their use, however, repays the makers of the Maxwell in many ways because each car each day is winning friends.

Today these friendships, expressed in terms of cars, are well on the road to 400,000.

You cannot go back of these numbers any more than you can go back of the fact that the sun rises in the morning.

They tell the story, and tell largely a story of what the Maxwell is made of—its metals.
