### GIANT ICEBURG FOUND.

Third of a Mile Long and Towers 75 Feet Above Water.

Icebergs of unusual size and number, one of them estimated to contain enough ice to supply the homes of a large part of the country for the rest of the summer, have been encountered by the United States coast guard cutters Seneca and Yamacraw which are polling the ocean steamship lanes, relates a Boston, Mass., dispatch.

Since early February the United States government, acting under an international agreement and at international expense, has maintained the annual iceberg patrol. The coast guardsmen have helped many vessels to steer a safe course through the danger zone. Some have been extricated from serious positions, others have been warned when they were headed for the ice.

The open winter caused a large number of bergs to break away early and drift south. They have become an abnormally serious menace to navigation, according to naval officers. Many are of huge dimensions.

The giant of all the icebergs is described by Lieut. Commander E. H. Smith, navigator of the Seneca, as approximately one third of a mile long and towering 75 feet above the water. This berg remained in sight for nearly a month, during which time it traveled 300 miles. The vagaries of the ice movements are shown by the fact that another berg drifted about the vessel, covering 35 miles in three days.

At times the patrol boats have gone alongside the floating refrigerators to obtain cracked ice for the wardroom or huge chunks which could be melted to replenish the fresh water supply.

Although plans for ridding the seas of these dangers to navigation have often been proposed the coast guard officers insist the icebergs "still rate the northern seas." They are awaiting with interest reports of experiments made by the destroyer Beckenridge which shot several bergs with torpedoes. Some of the coast guardsmen are frankly skeptical of this plan and insist that a torpedo would make no more impression on an iceberg than a popgun would on a mountain of cotton.

### Killed While Cranking Truck.

Lancaster, July 11.—Hazel Ghent, eleven years old, was killed here today while cranking a Ford truck which was in gear. The truck bounded forward and knocked the lad against the rear of a heavy truck, his neck being broken by the impact. Death resulted in about fifteen minutes.

Anderson, July 15.—Two men are dead and four men were committed to the county jail this afternoon following a shooting affray in the Carswell Institute community, 15 miles below here yesterday afternoon. Tom Hayes, 51, was killed outright, and T. F. Ramey died in a local hospital this afternoon, his body having been pierced with buckshot and his skull gashed and fractured by blows from a pick handle. The enmity between Hayes and Ramey dates back a week or more, when a small coffin and a note was found in S. T. Bagwell's veranda, warning him to get out of the county. Bagwell and Ramey are related and when the latter suspected Tom Hayes, Ramey became involved in the quarrels that followed. Allen Emerson, Walter L. Hayes, George and Ed Wilson are held at the county jail. Hayes and Ed Wilson being charged with the murder of Ramey, and Emerson and George Wilson held as accessories to the crime. The four men, accompanied by Tom Hayes, went to Ramey's house Thursday afternoon. Mrs. Ramey testified at the inquest today. Walter Hayes and Ed Wilson drew their guns and told Tom Hayes to beat Ramey until he was satisfied. Hayes used a pick handle filled with shoe tacks, on Ramey's head inflicting three blows, before Ramey opened fire, three of his shots striking Tom Hayes. Hayes was also wounded by a rifle shot which Barney, Ramey's 13-year-old son is accused of firing. After Ramey had fallen to the ground, his widow testified, that Walter Hayes stood over him and brutally beat him across the head with a small rocking chair until one of the rockers was broken. All of the men were heavily armed when they went to Ramey's house.

### Conclusive.

One night at a theatre some scenery took fire and a very perceptible odor of burning alarmed the spectators. A panic seemed to be imminent, when an actor appeared on the stage. "Ladies and gentlemen," he said, "compose yourself. There is no danger." The audience did not seem reassured. "Ladies and gentlemen," continued the comedian, rising to the necessity of the occasion, "confound it all—do you think if there was any danger I'd be here?" The panic collapsed.

## Here's why CAMELS are the quality cigarette

**BECAUSE** we put the utmost quality into this one brand. Camels are as good as it's possible for skill, money and lifelong knowledge of fine tobaccos to make a cigarette.

Nothing is too good for Camels. And bear this in mind! Everything is done to make Camels the best cigarette it's possible to buy. Nothing is done simply for show.

Take the Camel package for instance. It's the most perfect packing science can devise to protect cigarettes and keep them fresh. Heavy paper—secure foil wrapping—revenue stamp to seal the fold and make the package air-tight. But there's nothing flashy about it. You'll find no extra wrappers. No frills or furbelows.

Such things do not improve the smoke any more than premiums or coupons. And remember—you must pay their extra cost or get lowered quality.

If you want the smoothest, mellowest, mildest cigarette you can imagine—and one entirely free from cigarettey aftertaste,

It's Camels for you.

### Old Faithful Geyser.

The Lord didn't make many geysers or water volcanoes, but he gave a distinct individuality to each of the few which he did make.

He placed the majority of them in Yellowstone park and of these, one has been dignified with the name—Old Faithful, because of its dependability.

Geysers are do-as-you-please freaks of Nature. Their activities are generally devoid of any regularity. Some "go off" with great frequency; others only at long intervals. But, Old Faithful, true to the name, can be depended upon, day and night, winter or summer, to thrust her tremendous column of water high into the air

(sometimes 170 feet), for four minutes at a time, at intervals of from sixty-five to eighty minutes.

From a bowl-shaped surface opening an irregular passage, known as a tube, reaches down to the intensely heated regions. Water from the surface or underground springs trickles down through rocks and holes and collects in the bottom of this tube. The heat makes it boil. Then it turns to steam. The steam forces the water toward the top. Later clouds of steam arise. Finally, the pressure of the steam overcomes the weight of the water above and the geyser erupts with astonishing force, continuing to do so until all the water in the tube has been expelled.

The discharged water falls to the ground and cools off. Soon the water again collects in the tube, becomes heated to the breaking out point and the operation is repeated.

According to observations made by the U. S. Geological Survey, Old Faithful "shoots" 1,500,000 gallons of water at each eruption, or about 33,225,000 gallons every twenty-four hours—enough to supply a city of 300,000 inhabitants.
