**Home Demonstration News**

Specialist in Home Demonstration, of the Home Department, will meet at the home of Mrs. J. A. Bell, on Tuesday, April 25. At each meeting she will demonstrate the making of Blackberry Jam and other preserves. In putting up preserves, it is important to use the correct method. In South Carolina, the Home Demonstration Association. Any one who is interested is invited to attend any of the following meetings:

Tuesday, April 25.—Mrs J M Porter, Lugoff, 4:00 p. m.; Mrs J A Bell, Lugoff, 1:30 p. m.

Wednesday, April 26.—Town Hall, Bethune, 10:00 a. m.; Mrs W E Baker, Timrod, 1:30 p. m.; Mrs J S Dunn, Mt Zion, 4:00 p. m.

Thursday, April 27.—Mrs S J West, Beulah, 10:00 a. m.

**Important to Poultry Work**

This is one of the best growing months of the year for chicks. Dust all hens and chicks with good insect powder. Pay particular attention to head lice that may be on baby chicks. Provide chick size charcoal and ground bone or meat scraps in the mash hopper; feed when practical. Sour milk should be fed constantly. It is a good supplement for meat scraps. Furnish plenty of green food for chicks. Watch for crows, cats, hawks, etc. Clean summer quarters at once. Spray house to kill vermin. Make spring cleaning in poultry yard.

**Home Preservation of Eggs**

During the spring months of the year the hens are in heavy egg production.

There is a large supply of eggs pushed on the market which tends to bring the price down. Much of this supply finds its way into the cold storage plant where the eggs are stored for winter sales. If the eggs laid during this flush of production could be economically preserved for winter use by the customer, a great saving could be made on the egg and meat bill.

Preserving of eggs at home in the spring and summer for fall and winter use is not a new practice. The practice of preserving eggs has spread over the country and each year we find more people putting eggs away in storage. The method that has given probably the best results is the water glass method. The chemical name of water glass is sodium silicate. In any method of home preservation the object is to surround the eggs with some material which will fill up the pores in the shell and keep the normal liquids within the shell from evaporating.

**Method of Using Water Glass**

In this method use the following materials: Stone or earthen-ware crocks, a supply of sodium silicate, or water glass, and strictly fresh eggs. Each crock should have a cover.

In putting eggs down in water glass the following procedure should be followed. The crock should be washed and sterilized with boiling hot water. Be sure that it is absolutely clean. The preserving solution should be made up by taking 10 parts of water which has been boiled and cooled and 1 part of sodium silicate. Mix and stir thoroughly. The eggs should be carefully placed in the crock, small end down, care be-

ing taken so as not to break or crack any of the shells. Fill the jar up to about 2 inches of the top with eggs and then pour in the water glass solution and fill the crock to the top. The eggs will then be covered with 2 inches of this water glass solution. Place the cover tightly on the crock and set the contents in a dark cool place. By putting the cover on tightly evaporation will be lowered to a minimum. Put the preserved eggs in a basement or cellar on an elevated bench. Examine the crocks occasionally to see if more solution is needed to keep the eggs properly submerged.

The above method will preserve the eggs for a period from nine months to a year.

"Canned" eggs require a little different treatment in cooking than do fresh ones. Unless the large end is punctured before-hand they will crack when boiled. They are entirely satisfactory for scrambling, omelets, custards, cakes, and other kinds of cooking.

Only absolutely fresh eggs should be preserved. Dirty eggs or washed eggs should not be used. Washed eggs will not keep because the protective coating has been removed by the washing, and dirty eggs will become tainted in flavor. Infertile eggs are better than fertile eggs for preserving.

Have eggs the year round. Put your surplus now down in water glass solution.

**Horse Killed By Auto**

A horse belonging to Jim McDuffie, colored, was killed Saturday night when run into by an automobile being driven by W H Fulmer. From information obtainable it seems that Mr Fulmer, who is a school teacher in Darlington, had been to Columbia and was returning home. The lights on his car were out of commission and he was trying to make it to town with the assistance of a flashlight. Mr. Fulmer claims that he did not see the horse and buggy, which was traveling in the opposite direction. In the smash up the horse was cut about the shoulder by glass from the broken windshield and very soon bled to death. The car was not seriously damaged. The accident occurred about three miles from Bishopville on the Camden road. Mr Fulmer paid McDuffie \$100 and no case was made against him.—Bishopville Vindicator.

Few lumber experts in the Northwest can scale and tally more rapidly than Mrs Edgar Hannan. Oregon's only woman lumber operator.

**Shoes Repaired on Short Notice**

Uncomfortable feet make hours long, distance long and patience short. Let's help the feet. You can get that good Korry Krome, Neolin Soles Oak leather, Panco Soles, Neolin Soles and Turn Soles. Rubber boots soled and heeled. We machine stitch, hand stitch and lead stitch.

We have O'Sullivan, Good Year and other makes of rubber heels. We stand back of all our work. Give us a trial.

Abram M. Jones, Proprietor. Itf.

**Cow Flees From Butcher; Takes Refuge in House**

Selma, Ala.—"Sookie," a Jersey cow formerly the property of Ed Elbers, a negro, changed owners and from last accounts was grazing contentedly in the pasture of S. A. Watts, a farmer. All because "Sookie" realized her life was in danger and gave the grand hailing sign of distress from a second floor apartment window here.

Elbers brought "Sookie" to Selma to sell her to a butcher. As she neared the slaughter house "Sookie" suddenly bolted, dashed up the stairs of one of Selma's fashionable apartments, stuck her head through a window and moed loudly. Watts, passing by, caught the distress signal and purchased the cow.

**SCOTS QUIT NATIONAL DISH**

People of Scotland Greatly Concerned by Neglect of Oatmeal Porridge by the Masses.

Edinburgh.—Many people in Scotland today are seriously concerned regarding the neglect of porridge by the masses of the people.

Two years ago there were doubtless sound economic reasons for the housewife turning from this national dish, as the price was high, but there is no economic reason now for the boycott of porridge. Whereas the official index figure of the cost of living is still over 90 per cent above the prewar level, the oatmeal figure itself will be nearer 40 per cent and the milk figure (in Glasgow) is exactly 50 per cent over prewar values.

So that one must look for other explanations. Most authorities are agreed that the main factor in weaning the great mass of the Scottish public from porridge was the change in the starting hour on public works.

Oatmeal millers expected that when the costs fell cheapness would effect a cure for the trouble. But despite such publicity of the exceptional value which porridge offers today, the public remains shy of it.

One oatmeal trader now actually suggests an appeal to the king. Apparently his hope is that royal example will succeed where the strong card of cheapness has failed.

**CLAIMANT TO \$50,000,000**

Rufus Coppock, Plymouth fisherman and weaver, with his dog Tipperary, calmly awaits happenings before entering his claim in sharing one of the largest estates in America. The story of the Coppock estate is one of the most romantic. Rufus has a copy of a 99-year lease, which claimants declare proves their title to lands in New York, Jersey City, Philadelphia, Oil City, Phoenixville, Media and other parts of Pennsylvania. The lease was dated in 1818, and was to run 99 years. The descendants of Bartholomew Coppock, who founded the fortune, have organized the "Coppock descendants" and are preparing to claim lands leased by their ancestor more than a century ago.

**ALBATROSS FLIES 3,000 MILES**

Bird Follows Ship Six Days and Seven Nights on Pacific Without Furling Wings.

Seattle, Wash.—Starting from a small solitary island near Japan a black-headed albatross followed a steamship across the North Pacific for six days and seven nights. It became an object of unusual interest among both passengers and crew and several big wagers as to its length of flight and duration of strength.

Meat and bread tossed to the bird during the day was picked up from the waves without the great wings being furled. For six days and seven nights the race kept all at fever heat with excitement, and when 8,000 miles from the Japanese island and following a greedy breakfast of meat and fish the albatross turned abruptly and was lost in the distant horizon. The ship was then 1,900 miles from the nearest Alaskan port, but the bird is believed to have flown straight home.

Berlin Potash Trade Revives.  
Berlin.—Germany's potash industry, disrupted by the war, is rapidly getting on its feet again. Within the last few months Germany has concluded arrangements for resumption of her potash trade with all European countries, including the United States. The value of the total potash output in Germany in 1921 is estimated at 2,500,000,000 marks.

**If We Did—But We Don't**

Someone has said:  
"If we noticed little pleasures  
As we notice little pains;  
If we quite forgot our losses  
And remembered all our gains;  
If we looked for people's virtues,  
And their faults refused to see;  
What a comfortable, happy,  
Cheerful place this world would be."

**FINAL DISCHARGE.**

Notice is hereby given that one month from this date, on Monday, May 15, 1922, I will make to the Probate Court, of Kershaw County my final return as Administrator of the Estate of Mrs Mary B Boykin deceased and on the same date I will apply to the said Court for a final discharge as said Administrator.

D. A. BOYKIN.

Camden, S. C., April 13, 1922.

**Kelly-Springfield TIRES**

The reductions that have brought the price of Kelly-Springfield Tires down to a comparative basis were made possible simply by greatly increased production in the most modern and most efficiently equipped tire plant in the world.

The quality of Kelly products is better than ever, but now, it costs no more to buy a Kelly than the so-called high-grade tires.

The public is going to buy a lot of Kelly's this year, and we are going to sell them.

No waiting to order it for you.

High-grade Oils, Willard Batteries, Competent and Reliable Service on All Make Cars. Specializing Ignition, Starter and Generator Troubles.
