Let's Look At The Facts:

1. **The McCorkle Administration** operated the city during all the war years while prices were soaring at the lowest mill levy in the State.

2. **The McCorkle Administration** made possible the coming to Camden of the Southern Aviation School by laying the water line to the school at a cost of over \$15,000 and furnished the money, along with the county to lease subsidiary fields as well as buy land. Had this not been done the school would not have come to Camden and we would not have a half million dollar airport today. The Jaelyn Hosiery mill and the Supreme Products Company came as a result of utilities furnished by this administration.

3. **The McCorkle Administration** has installed public utilities, water and lights, from the airport to the river, providing facilities for hundreds of new industries soon to come to our community.

4. **The McCorkle Administration** is at present in the midst of a vast expansion program of public utilities, water, light and sewage extension, and when completed, Camden will have double its present water supply which today is inadequate to take care of anticipated needs.

5. **Plans Are Underway** for the circulation of petitions for paving every dirt street in the city where desired by property owners. This is the only solution of the dust and traffic problem.

6. **Francis McCorkle** had to devote his entire time to the war effort for the past several years. Let's give him a chance now to complete the fine things for Camden he has planned.

7. **With A Christian Gentleman** capable business man and fine leader at the helm, Camden will grow into a more beautiful and better place in which to live.
