"W. B. Stone, Sec." In reply, The Probressive Farmer has just received from Mr. Davis the following which we are glad to print as a current contribution to this interesting and important topic:

"There is no published book or printed authority on the subject in existence to-day, so far as I know. If there is, I have never seen it or heard of it.

"The Government Bureau of Agricultural Information has no bulletin future. I have been trying for some The ear from "Bone county" was time to interest the Agricultural Debusy with other things to give me a hearing of a chance to have the

"My authority is based on experience and investigation along indeweight for from two to three months after being picked, as set forth in a for which I am asked to give a specific authority, there is no question. The chief authority is the cold fact known to all growers and handlers

"The first cotton which opens is

green, and if carried to the gin soon after beng picked the lint it cut by the gin saws and the staple so badly damaged that the loss in price is considerable, Perhaps the firsst cotton ginned is actually worth a cent a pound less to the manufacturer because of the damage to the staple than the same cotton would be if left to dry and ripen in the house. In this respect cotton only follows the natural laws followed by all other agricultral products. Melons, fruit and a hundred other things ripen after being gathered.

"The greener and wetter the cotton the more closely it sticks to the seed, and the harder it is to seperate when being ginned. Every man who has had a day's experience about a cotton gin will bear me out in this statement. The closer the lint adheres to the seed the less the lint from the cotton when ginned. In other words, more of the lint is left on the seed and a proportionate lost is the result. "It now seems to be an unquestioned fact that the seed is the lint producer of the interior cotton boll. The seed is the mother upon which the lint feeds and grows long and fleecy. The oil which the seed contains is, in part, conveyed to the lint to give it the rich, silky gloss, and feel that it ought to possess in order

exposure in the icy waters of Lake

Deer Park is about thirty miles south of Grand Marais, on the shore of Lake Superior. Several bodies from the wreck have washed ashore, and two are known to be those of the first mate and the watchman.

Marine men suggest as possible explanations of the foundering that the engines became disabled; that the plates opened and that the ship sprang a leak and that the hatches max not have been securely battened, permitting the steamer to fill with water from the waves washing over her decks.

FASTED THREE WEEKS. Dog in a Dry Well Without Food for

Twenty-Three Days.

On the night of the 17th of September Messrs Wade Lamar, Brooks Cato and Dave Gaston went fox hunting near the town of Sally. When at Mr. Phillip's place they missed one of the hounds, a white and spotted dog. They searched all the neighborhood the next day without finding her, and came home presuming that she had been stolen, and was shut

up somewhere. Well, on Monday, the 14th of October, Mr. Phillips came to town and reported that during the middle of the week before he had found the hound at the bottom of a dry well on his farm. She had remained in the well for twenty-three or twentyfour days without food or water, an of course was extremely emaciated

and weak. She was carried to Aiken and delived to Mr. Lamar. This occurrence is so remarkable that it would seem incredible if all the parties concerned were not well known, and highly reputable citizens of Aiken county.

to class as first-grade cotton. If this lint is seperated from the seed immeditately after the picking process there is no chance for this to take

"Fifteen hundred pounds of cotton in the seed, when picked dry, may not weigh in the seed any more three months afterwards than it did the day it was picked, but the lint ginned from the seed will weigh more. "I am especially anxious for the
