my mother told me to take Lydia E. Pinkham's Vegetable Compound. The firstbottle helped me so much that I took six more bottles and felt fine. I have just given birth to a nice baby girl and am feeling strong and well. So different

from the way I felt before. I am taking the Vegetable Compound right along while nursing. The baby seems to be in good health, and my friends say they see a big change for the better in me."-Mrs. EUGENE DUBE, 59 Woodbridge Street, East Hartford, Connecticut.

The Vegetable Compound is a splendid medicine to bring back health and strength. Many mothers have found this true, as did Mrs. Dube. Ask some of your neighbors and friends, for there are women everywhere who know by experience the value of Lydia E. Pinkham's Vegetable Compound.

Planked dishes sound complicated to one who has never prepared them.

However, given the plank, a two-inch-thick oak, hickory or maple plank, with a groove far enough from the edge to hold the juices of the meat, and the rest is simple. A plank that has been used, browned and

baked well is much better as it ages. It is best to put a new one, after giving it a good scrubbing and rinsing, into the oven and give it a good, hard baking.

Don't Let That Cold Turn Into "Flu"

Rub on Good Old Musterole That cold may turn into "Flu." Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub good old Musterole on the congested parts and see how quickly it brings relief.

Colds are merely congestion. Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

As effective as the messy old mustard plaster, does the work without blister. Just rub it on with your finger-tips. You will feel a warm tingle as it enters the pores, then a cooling sensation that brings welcome relief.

To Mothers: Musteroleis also made in milder form for babies and small children. Ask for Children's Musterole. 35c and 65c, in jars

Pointers on Saving Tubes From Blowouts

By HERBERT S. HALL, E. E.

Many radio fans when trying out a new circuit and at other times are very much afraid that their tubes might be destroyed by the B battery potential being accidentally connected cross the filaments.

If two 221/2-volt B batteries are connected in series with a resistance of approximately 20,000 ohms as shown, a small voltmeter will show practically no voltage across the terminals A and B, that is, less than 1/2 volt, an amount which may be safely applied across the flament of any tube without danger. Yet when terminals A and B are applied to the plate circuit in the usual manner the volume of sound will be the same as though a 22¹/₂-volt battery were used in the regular way.

There is one very good use of this arrangement other than for testing purposes. When leaving the set to be
