

THE MODERN WAGON

Constructed Alike

Fifty years ago, Wagons and Bridges were built of oak, hickory and maple. Now we know better, and use the strongest shapes of good steel, and build them for the heaviest lifetime service.

THE DAVENPORT ROLLER BEARING STEEL WAGON

Constructed of I-beams, channels and angles, solidly riveted together with large rivets, put in hot. The gear parts and wheels are braced and trussed like the modern steel railway bridge. In the DAVENPORT you have a wagon of

FIVE THOUSAND POUND CAPACITY

Stronger, more durable and of lighter draft than any other wagon of equal capacity.

The wheels of steel, with strong, round spokes, forged solidly into the hubs and hot riveted into the tires, do away with the resetting of tires, loose spokes, and cracked felloes.

NO BREAK-DOWNS

Lasts a Life Time

Oil Without Removing Wheel

No Repair Bills to Pay

Gears of Steel

Built for All Kinds of Weather

PRINCESS CHOPS TREES.

Alice of Greece Does It to Keep Herself Fit.

The Princess Alice of Greece, who was the English Princess Alice of Battenberg, has spent the past summer chopping down trees to keep herself fit.

The Princess Alice is 30, a cousin of the queen of Spain. Shortly she will take her children back to Athens for the winter season and give up felling trees to begin again her work of encouraging the Greek women to earn their own living by home sewing—the Princess Alice's own particular hobby.

The two eldest little girls, Princess Marguerite and Princess Theodora, 11 and 10, respectively, are as brown as their mother and as strong, though they have not been chopping down trees. They have been swimming every day for an hour and a half in the warm translucent water of the Corfu channel. Prince Andrew's wife herself is a fine, strong swimmer now, but it has not been a long time since Sheldon Whitehouse, who was then secretary of the American legation, pulled her out of the water and saved her life when she had gone down three times.

The villa of Mon Repos, the summer place of Prince Andrew and the Princess Alice, was the favorite country residence of the late King George, who left it to his third son, but unfortunately he failed to leave the means to keep it up.

Prince Andrew is a colonel of a cavalry regiment—not a lucrative employment. Princess Alice also is not rich, and the pair, who for royalties are poor as church mice, have four children, all girls, a sad prospect these days when Europe is full of royal girls and short of royal boys to marry them.—Corfu (Greece) Correspondence to New York Sun.

Peanuts as Milk Substitute.

Ground peanuts form the basis of the milk substitute patented by W. J. Melhuish, of Dorsetshire, England. Water is heated to boiling in a vessel provided with a stirrer and jacketed, the heat is turned off, cold lime water is poured in, potassium or sodium phosphate is then added, and this is followed by the peanut meal, calcium chloride, sugar or other sweetening, sodium bicarbonate, magnesium carbonate, and butyric acid. After straining, ammonium carbonate and citric acid, with a little common salt also, may be added.

SCIENCE IN PACKING BOXES.

Special Machine to Determine Availability of Timber.

More than four and a half billion feet of lumber yearly is made into boxes in the United States, and the problem of lessening the great losses due to breakage of boxes carrying merchandise is one of importance. A specially designed testing machine is now being used at the Forest Products laboratory in Wisconsin in the attempt to determine the best kinds of boxes for given service and the woods best suited for box making. A hexagonal drum with 3-1/2 foot sides lined with thin sheets of steel and pieces of scantling bolted to the end cause the boxes placed inside to be raised and dropped back as the drum is rotated. The fall is regarded as an imitation of the average handling in transportation. The test boxes are filled with cans containing water and a careful record is made of the number of falls required to break up each box thus loaded and of the manner in which it fails. From data yielded by the tests already made, box woods have been classified in three groups.

Like a Sleighbell.

Yon Yonson, a citizen of a Wisconsin town, rushed into the village store one night just before closing time. Yon was hatless, coatless, and breathless, and as he dashed in he dropped on his knees and begged the storekeeper: "Carl, Carl, hide me, hide me! The sheriff's after me!" "I've no place to hide you here, Yon," answered the storekeeper. "You moost, you moost!" screamed Yon.

"Crawl into that gunnysack then." He was no more than hidden when in ran the sheriff.

"Seen Yon?" he questioned. "Can't see him nowhere," replied the other, truthfully.

But the sheriff wasn't satisfied and he went nosing round. Soon he spotted the gunnysack.

"What's in here?" "Oh, just some old harness and sleighbells."

The sheriff gave the sack an awful kick. "Yingle, yingle, yingle," moaned Yon.—Philadelphia Ledger.

A German hospital uses a series of mirrors to reflect beams of light free from shadows on an operating table from an arc lamp outside the operating room.

FISH VERY SAFE.

Little Reason to Apprehend Parasites in Their Flesh.

Parasitic worms in fish often give such concern that over sensitive and uninformed individuals acquire a strong aversion for species that has been known to be wormy. In a circular of the United States bureau of fisheries, Prof. Edwin Linton and Dr. C. W. Stiles call attention to the fact that no species of animal is free from parasites, and probably no individual animal is long without them. The wormy butterfish of which complaint has been made to the New York health department are quite harmless. Investigation has shown these parasites to be nematodes (round worms or thread worms) of species never found alive in man, and while these worms are very common in the stomach and its appendages in most fishes, they appeared in the flesh in only four butterfish out of 6,000 examined, and each of these four fishes had but one worm. The flesh of most marine food fishes is notably free from parasites. Unlike the trichinae of pork, these thread worms—even uncooked—have never been known to infect a human being and, unlike the insect larvae or maggots that develop in decaying meat, the presence of nematodes still active is an indication of the comparative freshness and good quality of the fish. To condemn the butterfish on account of these parasites cannot be justified on grounds of public health. If this fish is thrown out, consistency would demand that all other fishes be rejected as well as fowls, game, beef, mutton, pork, etc., as all have parasites.

Origin of the Curfew.

A note by Ruskin Butterfield reminds us that although Shakespeare speaks of "the curfew bell" and Milton of "the far-off curfew sound," Chaucer more correctly refers to "corfew tyme," as curfew was originally an appliance for covering the fire. There are examples still in existence, for instance, in the Hastings museum; they look like large tea cozies in metal. They served, as moderns use fireguards, to prevent sparks setting the house on fire, and the housewife heaped the embers together at night and placed the curfew over them to lessen the combination and in the morning save the trouble of lighting the fire again.—London Globe.

How to Live Long.

Washington, Dec. 18.—The public health service, which has been gathering statistics on nervous diseases and their tendency to shorten life, today issued a bulletin against worrying.

"So far as is known," says the bulletin, "no bird ever tried to build more nests than its neighbor; no fox ever fretted because he had only one hole in which to hide; no squirrel ever died of anxiety lest he should not lay by enough nuts for two winters instead of for one; and no dog ever lost any sleep over the fact that he did not have enough bones laid aside for his declining years."

SHERIFF'S TAX SALE.

By virtue of execution directed to me by G. A. Jennings, treasurer of Bamberg county, I, S. G. Ray, sheriff of the said county, have levied upon and will sell to the highest bidder, in front of the court house door during the legal hours of sale, on Monday, the 1st day of January, 1917, the same being salesday in said month, the following described real estate, to wit:

Estate Jacob Carter in Three-Mile township, containing 70 acres, more or less, and bounded North by lands of Estate of Isaac Carter, East by lands of Estate J. H. Smith, South by lands of Wms. Carter, West by lands of J. H. A. Carter. Said lands to be sold for taxes due and owing the State of South Carolina and County of Bamberg.

Terms of sale: Cash; purchaser to pay for papers. S. G. RAY, Sheriff for Bamberg County, Bamberg, S. C., Dec. 12, 1916.

CITATION NOTICE.

The State of South Carolina—County of Bamberg—By J. J. Brabham, Jr., Probate Judge:

Whereas, Mrs. Jessie Walker made suit to me to grant her letters of administration of the Estate and effects of H. W. Walker.

These are, therefore, to cite and admonish all and singular the Kindred and Creditors of the said H. W. Walker, deceased, that they be and appear before me, in the Court of Probate, to be held at Bamberg on December 28, 1916, next, after publication hereof, at 11 o'clock in the forenoon, to show cause, if any they have, why the said Administration should not be granted.

Given under my hand this 12th day of December, Anno Domini 1916. J. J. BRABHAM, JR., Judge of Probate.

The Quinine That Does Not Affect The Head Because of its tonic and laxative effect, LAXATIVE BROMO QUININE is better than ordinary Quinine and does not cause nervousness nor ringing in head. Remember the full name and look for the signature of E. W. GROVE, 25c.

Piles Cured in 6 to 14 Days

Your druggist will refund money if FAZO OINTMENT fails to cure any case of Itching, Blind, Bleeding or Protruding Piles in 6 to 14 days. The first application gives Ease and Rest. 50c.
