

NOMINATED BY PRESIDENT.

South Carolina Postmasters Are Named.

Washington, June 4.—President Wilson has just nominated the following postmasters in South Carolina, a number of them being reappointments:

Manton B. McCutcheon, Bishopville; James M. Byrd, Branchville; Clinton G. Rowland, Central; James A. Barrett, Clover; Clara A. Donner, Due West; A. C. Turbeville, Lake City; Maxey J. Spears, Lamar; John W. Willis, Lynchburg; Ellen M. Williamson, Norway; William B. Wright, Jr., Shelton; Marie C. Harley, Williston; Martha E. Nichols, York.

Mosquitoes and Malaria.

Malaria is one of the most common diseases of our southern states and there is only one way by which it can be contracted—through the bite on an anopheline mosquito. This mosquito receives the infection from a person suffering with malaria; the germs multiply in the insect's stomach and in about 12 days migrate to its salivary glands, where they are passed out into the blood of a person subsequently bitten by the mosquito. The mosquito is not born with the malaria germs, but to get them must bite a person who has them in his blood.

The malaria carrying mosquito usually bites at dusk or twilight, or sometimes during the hours between sunset and sunrise. Protection against mosquitoes can be had by screening the bedroom, or preferably the entire house, and this also rids the house of flies. But the best means of freeing a home of mosquitoes is to destroy their breeding places. Mosquitoes, as a rule, do not fly far from their breeding place, and the question of control is merely a question of effort on the part of the individual householder. The majority of rural homes, and certainly the majority of rural communities, can either have or not have mosquitoes.

Mosquitoes breed in any standing water, but prefer clean water. The malaria-bearing mosquitoes like shallow water, especially pools protected by shade, grass, or other vegetation. They lay their eggs in such places and these hatch into larvae or "wiggle-tails," then into pupae, and finally change into mosquitoes. It takes from 9 to 15 days for the full-grown mosquito to develop from the egg. To get rid of standing water, sub-soil drains, the filling of low places, and the emptying of water containers at least once a week, are necessary. Care should be taken to see that gutters do not become stopped with leaves or that broken bottles and tin cans do not accumulate and collect water. In places which it is not practicable or desirable to drain, the wiggle-tails or larvae may be killed by pouring kerosene oil on the water; using one to two ounces on every 15 square feet of surface. This measure must be repeated every week. Un-

BOX OF PILLS FATAL.

Child Dies From Eating Quantity of Medicine.

Anderson, June 3.—The little son of Mr. and Mrs. Benjamin Barr, died this morning after horrible suffering. The little fellow got hold of a box of liver pills and ate them and in a short time he was found in convulsions. Physicians were summoned but he had one convulsion after another and before doctors could relieve him the little fellow died. He was two and one-half years old, and a very bright child.

der suitable conditions the breeding of mosquitoes can be controlled in ponds by introducing fish, the minnows destroying the eggs and larvae.

Malaria is a very serious disease, characterized by chills and fever, weakening of the body, and general ill-health. It is responsible for a greater loss of time and money and inefficiency, in many sections, than any disease we have. It is important to recognize that malaria cannot be spread without mosquitoes and that malaria is preventable, the prevention depending on the cooperative effort of all the individuals and families in a community.

How to prevent malaria and mosquitoes.

1. Begin early in the spring and continue the preventative measures during the warm months.
2. Remove garbage cans, bottles, buckets, and barrels which are likely to collect water.
3. Drain or fill every pond or pool of stagnant water. Oil places which cannot be drained.
4. Screen the house, especially the bedrooms, and keep the screen doors shut. Galvanized iron screen of at least 14, preferably 18, strands to the inch should be used.
5. Keep mosquitoes away from any person having chills and fever, or they will carry the disease to others.—B. E. Washburn, M. D., in The Progressive Farmer.

"Say, Pop, what is gravity?"
"Gravity, my son, is a force which brings down everything in this world—except prices."—New York Evening Post.

GOSSETT TO ASK FOR NEW TRIAL.

Prejudice to Be Alleged When Argument is Made at Abbeville Soon.

Greenville, June 4.—Motion for a new trial for Kenneth Gossett, recently convicted in Abbeville county on a charge of criminal assault, will be made at the next term of court in Abbeville county, which term convenes next Monday. This announcement was made here today by attorneys for Gossett. It will be alleged in the motion that two jurors made statements derogatory to the defendant before they were put on their voir dire. It will be alleged that they were prejudiced in the matter. Gossett is now in the state penitentiary to which he was recently sent.

BUILD A HOME

Bamberg Needs Them

Information from an authentic source indicates that lumber is going to take another advance as soon as the railroads adjust the present embargoes.

BAMBERG NEEDS more HOUSES. LETS make our town go over the TOP in HOME BUILDING.

We have the lumber and need to move a little surplus stock now on hand. **YOU** folks have the money; **YOUR** town needs the **HOMES**, so why not put all to action during the summer months while labor and material both are easier to get and **BUILD**.

We are now in position to furnish framing and finishing lumber and are going to offer some bargains to those who place orders with us during the next few weeks.

We want to buy good pine logs for our Orangeburg plant and will pay the top of the market. If you have any, better see us.

Co-operating for Growth

The dollars of our savings depositors are multiplying—the number of people who are opening savings accounts at our bank is increasing—and the accounts of our old depositors are growing.

Our books show an increase in savings deposits of 42 per cent. since the first of January. Deposits of \$122,180.81 at the close of business, December 31, 1919, had reached \$174,582.28, at the close of business, April 30, 1920.

We know that every growing savings account and every new savings account means that the owner of that account is progressing. The figures of our growth show that the service we have rendered has proved efficient and helpful.

But it is our aim to be of even greater service, and to enlarge upon the service we are now rendering at every opportunity. We believe that the patronage and cooperation of our friends which have been so largely responsible for the progress we have already made will also be important factors in the growth we are looking forward to.

It will be our endeavor to continue to deserve your support. Thank you for the help you have given us.
