

DOTS FROM SWEAT SWAMP.
 Mr. Editor—I will send you a few lines from this corner, as the new year has come in and all who have decided to work this year have gone at it.
 The cotton is not all picked yet, but the stalk cutters are running where it has been picked. It looks as if the power will almost overtake the reapers in getting in the new cotton crop.
 I saw that done for the first time the past year in the hustling town of Ohio. One man was cutting out with a mower, (the oats we blow down) and another was laying off lands and sowing peas; and just beyond them was another man running a reaper and binder. This was on the lot now owned by Mr. H. J. Bennett, and Mr. A. J. Huestess was present at the time.
 The people of our section have changed places considerably. Many have moved away and others have moved in and taken their places, and all appear to be suited. Labor is scarce and hard to get for wages—they all want farms. There are some who do not know what they are going to do yet, but I guess these will be some planters later on.
 I see signs of a new saw mill going into operation nearby soon, which will give lumber to some who dislike to haul it so far.
 Well, Mr. Editor, I do not know what to write about further. The boys it appears, have all about decided to marry soon. I hear nothing to make me think I will get to get turkey—only an occasional rumor from Wesley, and I have not banked on the too much, for I look for the square to move his business to a railroad town and that town will be D., and in that case, if he should marry of course he would board the train and take a tour, and would have no "in-fair, and I would be left."
 Jan'y 28, 1904. A Hermit.

PEN AND SCISSOR GRAPHS
 Wofford College will celebrate its 50th year this summer.
 The Dillon folks have not given up the fight for Pee Dee county.
 W. J. Bryan proposes to visit Columbia some time this month.
 The County Superintendents of Education meet in Columbia on the 8th.
 The Legislature adjourned Saturday to Tuesday on account of Salsaday.
 Hon W. C. Whitney, who was once Secretary of the Navy, died Tuesday.
 The State Fair Society met in Columbia Wednesday to discuss the next Fair.
 Miss Nannie Bryan, sister of Wm J. Bryan, died Saturday at Lincoln, Nebraska.
 Governor C. B. Aycock, has consented to deliver the annual address at the Maxton Graded School Commencement, May 20th, 1904.
 Somewhere in South Carolina a man named Horse married a Miss Oats. That is one horse that knows a good thing when he sees it.

DOTS FROM BRIGHTSVILLE.
 Mr. Editor, here I am again. We have had lots of cold and gloomy weather. I hope you had a plenty of good dry wood. It was more than we had. It may sleet and the wind blow, but our school continues large.
 I believe the people that have been practicing to marry have all got married at last. If ever I get that far on, I think that I would want it real from the beginning. If I were you and you were me, and were to ask a girl to be your better-half, and she were to say to you that "You scare me!" what would you do? Pa says for me to be quiet, that it is "Leap Year," and that she will be apt to want me to scare her again, but I tell you that if there are any more scaring going on it will be her, for I believe that it is unlawful to scare women.
 I do hope that our farmers in this county will not go over cotton this year, for where there are as many children as there is in Marlboro we need lots of love and hominy, and if you don't believe we have it, come up this summer when the days get long and hot to see me. I know that he would be glad to entertain you for a while, then, I believe you will say "yam, that an old ham." While we love money, we also love to have "money's worth" the year round. We can't do it if we plant all cotton and, as labor is scarce, if we plant much cotton it will take the most of our time in the field for Mr. L. D. Stubbs says that it takes about thirteen months of the year to make and gather a cotton crop, while in 6 weeks he can make a corn crop.
 We are glad to say that Mr. B. L. Liles is much better.
 Mr. B. E. Moore still has some of that guano that he guarantees "no grow, no pay." So, boys, if you want to make big crops on a little place, come up and get some of the red stuff that makes the cotton grow.
 A School Boy.
 February 2, 1904.

FAITHFUL TO DEATH
 The Pioneer Press, Minnesota, prints the following incident which occurred at Great Falls, Montana, last spring.
 The victims of the recent blizzard that swept over the northern portion of that state, killing thousands of lambs and a number of cattle, are now being found with the passing of the snow. In nearly every case the victims were sheep herders who were caught in the storm and frozen to death before they could reach shelter. Almost without exception these sheep herders are men without connections of any kind. One of the most pathetic cases that has come to light is that of William Plumber, an aged man, whose sole friend, so far as known, was a handsome shepherd dog which he had raised from a puppy. This dog could do almost everything except talk. When Shep, as he was called, dragged himself into the little sheep town of Shelby, with two of his legs frozen, the man of Plumber was known. It was useless to present a search for him without the aid of the dog, and as the animal was, apparently, too disabled to make another move, it was proposed to wait several days before searching for the body of the missing man.
 Shep, in spite of his condition, was ready to lead the party, however, and although the progress was slow and painful over the snow-covered hills and vales, the faithful dog led the party to the body of his master. Crouching beside the frozen corpse the dog worn almost to a shadow by the hardships he had undergone, uttered a long, penetrating wail, and then licking the cold face of his master, expired. Plumber and the dog were buried in the same grave.

Don't You Love Flowers?
 If so, and you want some pretty pots of all sizes in which to place them, call at the Hardware store and you can be suited.

NOTICE OF FINAL DISCHARGE.
 ESTATE OF E. T. COVINGTON.
 HAVING this day filed in the Probate Judges office our final Returns as Administrators of the Estate of E. T. Covington deceased, notice is hereby given that we will apply to said Court on the 29th day of Feb'y 1904 for Letters of Dismissal as such Administrators.
 J. C. Covington,
 T. G. Covington,
 Administrators.
 Jan 29th 1904.

AN ORDINANCE,
 AN ORDINANCE to prevent Railroads from running their passenger, freight or other trains within the corporate limits of the town of Bennettsville more than ten miles an hour.
 It is ordained by the Mayor and Alder men of the Town of Bennettsville, South Carolina, in City Council assembled, that from and after the ratification of this Ordinance, all railroads running into the Town are prohibited from running their passenger, freight or other trains at a speed greater than ten miles an hour, within the corporate limits of the town, and any railroad violating this Ordinance shall be subject to a fine of not more than one hundred Dollars for each train, to be imposed by the Town Council, and to be collected by execution on failure to pay the same.
 Done and ratified in Council this 29th day of Jan'y, A. D. 1904.
 P. A. HODGES, MAYOR,
 M. McLAURIN, Clerk and Treasurer.

FOR SALE

A Chance For Bargains.
 Special attention is asked to the Bankrupt Sale beginning tomorrow at Chio, S. C.
 "So your manna calls me her star boarder, does she?" he said highly pleased. "Why is that?"
 "Because," replied the lady's little daughter, "she says you hold yourself so high, and yet you seem so little."
 Chicago Tribune.

AN ICE HOUSE.
 An Inexpensive One of Convenient Size For the Ordinary Farm.
 In constructing an ice house it should be remembered that the smaller the house the greater the care to be exercised in erecting the building and packing the ice, advises American Agriculturist in submitting the following plan for a farm ice house.
 A house twelve feet square and eight to ten feet high is a very convenient size for an ordinary farm. In building care should be taken to secure perfect drainage. The foundation should be dug eighteen to twenty-four inches or until gravel is reached. Where this is not possible the lower two feet should be filled with large stones on top of which are placed smaller stones and gravel, until a smooth bottom is obtained.
 For a house twelve feet square a frame of 8 by 8 inch timbers is placed on the brick or stone foundation for the base. A smaller square frame is made for the plates, and this is supported at the four corners with 8 by 8 inch posts eight feet long and by two or three 2 by 8 inch studs on each side, with extra ones for door posts on the front side. The outside is covered with rough pine boards, the cracks between the boards being covered with battens. Inch boards line the inside up to the plates, and the space between is filled with sawdust. The cheapest form of roof is made of inch boards, with battens pieces over the cracks, and is supported by three horizontal strips on each side laid across rafters. The rafters are scanted beveled and nailed together at the top and set into or spiked to the plates. Half to two-thirds of the middle of the ridge is cut out, leaving an opening three to five inches wide, which is covered by a cap raised several inches from the roof to permit of ventilation, but wide enough to prevent rain getting in.
 The doors are made of a single thickness of boards. Care should be taken to have them tight so as not to permit circulation of air. To make them more effective the space between the door and the boards placed on the inside of the door frame to prevent sand, dust or other packing material used from falling out can be padded with straw when the house is filled. The expense of constructing the building will depend largely on the cost of material, but should not exceed \$25. Often there are waste timbers or boards about the farm which can be made to answer very well.
 To protect the house from the beating rays of the sun it is best to build under the shade of a large tree or on the north side of some larger building. Its effectiveness in keeping ice will thus be greatly increased.
 The Tide Toward New England.
 At the Massachusetts agricultural board meeting Dr. G. M. Twissell presented a very cheerful view of agricultural prospects. He believes that "the outlook for New England agriculture must be positive. Here are the markets, here the industries are multiplying rapidly, here is to be the great distributing center for manufactured products here and the acreage which will yield larger crops than prairie or plantation, and here a climate adapted to the growing of a vast variety of food for man and beast of a quality unequalled upon the face of the earth. In the constructive work of a more progressive agriculture the student, professor and worker have before them the greatest opportunity of their lives. The conditions are favorable, the times are auspicious, the tide is setting toward New England, and the currents of thought are centering here."

Benevolent Aisle Grease.
 A farmer in Grant county, Okla., advises the use of axle grease as a protection for trees which are liable to be attacked by rabbits. He further claims that it is a protection against borers and that he has used it for twenty years.
Preserving Eggs.
 A number of experiments carried on in Germany in preserving eggs appear to show that the best results were obtained when eggs were either varnished with vasoline, immersed in lime water or in water glass solution.
Mysterious Circumstance.
 One was pale and sallow and the other fresh and rosy. Who's the difference? King's New Life Pills to maintain it. By gently arousing the lazy organs, they compel good digestion and head of constipation. Try them. Only 25c, at J. T. Douglas & Bro Drugist.
 Bixby, N. C.—I know that Lee's Remedy is the best I ever tried. I think it a God-sent remedy in my home, I have been troubled with headache from a child, but Lee's Headache Remedy is the best of all. So will say to my head-ache sufferers, "Try this great remedy and be convinced."
 MRS. T. C. ALLEN.
 Sold by Bennettsville Drug Co.

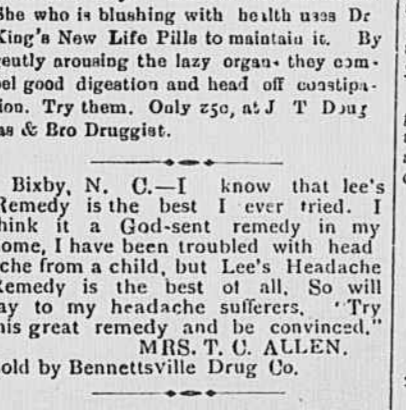

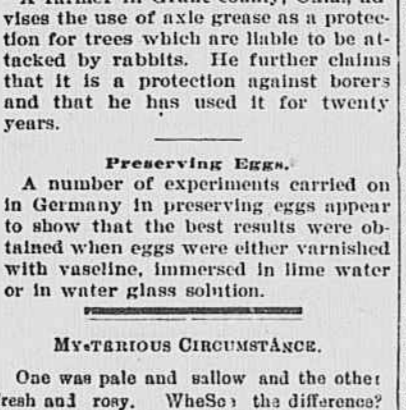

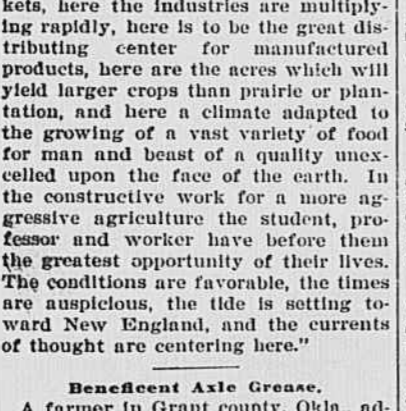

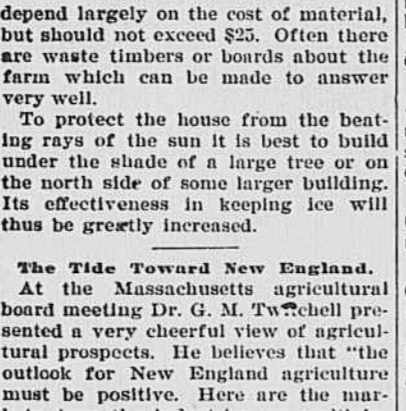

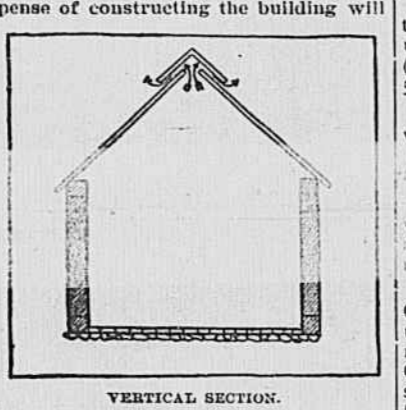

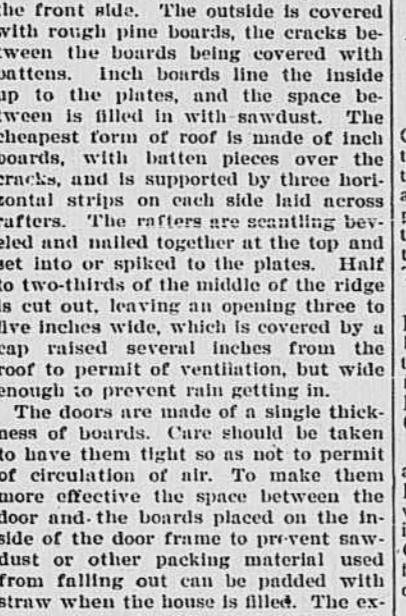

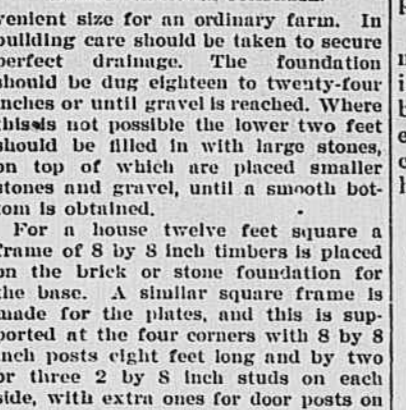

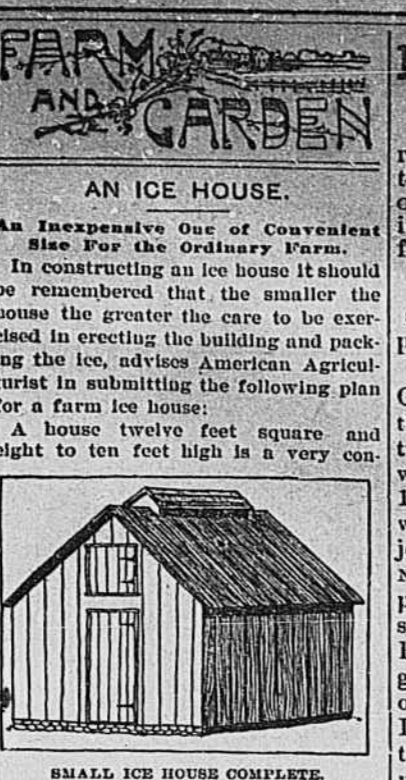

A Knock Out
 Dr. King's New Medicine for cold, cough, croup is now getting in some of our work. It is speedy, safe and sure. The price is only 25c. Convenient package. Find it at Bennettsville Drug Co.

How Kirkwood Makes Cotton Pay.
 Through the kindness of Mr. R. L. Kirkwood, we give our readers his experiments in raising cotton for profit. It is a fact that make cotton pay you must get the best seed and raise more or less ground. This Mr. Kirkwood has proven to be the secret in raising cotton for profit with the proper use of fertilizers. For further information as to his "big boll cotton," write him.
 First of February broke up my ground with a two-horse plow, deep as possible, wing off. Sowed broadcast 600 pounds Acid, 200 pounds Muriate of Potash, then harrowed in with Disc Harrow.
 April 1st I put out broadcast 400 lbs. Cotton S. Meal, 200 lbs fine Ground Fish Scrap, 200 lbs. Ammoniated Fertilizer, 8,4,5; harrowed this in. Latter part of April ran rows off 5 feet apart—throwing two furrows together for a ridge. Dropped cotton 24 inches in drill with Caldwell Dropper. When cotton was up good, swept around with 14 inch Sweep, lapping dirt good, so as to destroy all young grass and weeds; plowed out the middle with "turning plow," wing off. My object was to break up land deep, not turn up soil, and KEEP LAND NEARLY LEVEL. Thinned cotton to one stalk in hill; then for second plowing, took 16 inch sweep, swept around before plowing out middle, same as at first time. I sowed 200 pounds Soda and 200 pounds of Peruvian Guano on each side of cotton, then hoed out the cotton what grass, which was very little. This cotton was thinned out and had only one hoeing—it grew so fast it did not need it. The latter of June I gave it the third and last plowing—using a 20 inch sweep 3 furrows to the rows. I gathered 5220 pounds seed cotton, making 1810 pounds Lint off of same 1 1/2 acres.
 My Formula of Guano analyzed 61 per cent Acid, 5 1/2 per cent Ammonia, 6 1/2 per cent Potash. I have used this Formula 3 years experimenting, and made a success of same. Put Acid and Potash out early; break land deep, try no "turn up soil." Sow all fertilizers broadcast, except your top dressing, when you use nitrate of soda. Any farmer can try one acre experimenting, and prove what he can make, and learn how to farm so as to make it pay, especially planting my cotton.
 Respectfully,
 R. L. KIRKWOOD.

PERUVIAN GUANO FOR Cotton and Corn.
 What Some Planters Who Have Used Peruvian Guano The Past Season Think of It.
 Mr. T. S. HAIGLER, of Columbia, S. C., writes: "I used 8 tons of Peruvian Guano this year. Used most of it on my Corn. I used it in this way: Put 350 lbs to the acre and 50 pounds of Cotton Seed Meal. The meal acts as a dryer in putting it down and makes it feed well in the distributor. From this I gathered an average of 30 bushels of Corn to the acre. I tried it on 3 acres of Cotton as an experiment. Put only 400 lbs to the acre and used nothing else, and must admit that this 3 acres are the best Cotton I have, though I used 400 lbs. of other mixtures on the balance. I expect that it (Peruvian Guano) next year exclusively. This will testify how well pleased I am with the material."
 Mr. F. H. KING, of Hartsville, S. C., writes: "I made an experiment with Peruvian Guano as a side dressing for Cotton, putting it down at the rate of 105 lbs to the acre, on a part of one field on July 8th. I weighed the pickings from the rows thus manured and also that from the rows not so manured, in the same field and on the same quality of soil, and find that the increase from the use of Peruvian Guano was 294 lbs of Seed Cotton per acre. I made 2, 134 lbs of Seed Cotton per acre where I used Peruvian Guano and 1,844 lbs where I did not use it."
 Mr. C. F. MOORE, Manager of the Breckinridge Seed Farm at Bennettsville, S. C., and the originator of the famous Breckinridge Cotton, writes: "We used 10 tons of Peruvian Guano on the Excelsior Seed Farm this year. We are more than pleased with results. We used a portion under our Cotton and the balance as a top dressing, for which purpose it was more satisfactory than Nitrate of Soda. Peruvian Guano makes the Cotton fruit close and last and am satisfied that it is the Guano for the South." (Mr. Moore has bought for his own use and to sell, over 400 tons of Peruvian Guano for next February arrival).
 Mr. L. S. WELLING, of Darlington, S. C., writes: "I am so well pleased with the car of Peruvian Guano I purchased from you last spring that I am going to use it exclusively next season, and have purchased 125 tons for my own use." (Mr. Welling is our General Agent in South Carolina, and has sold over 5,000 tons of Peruvian Guano for his delivery next January and February).
 Mr. J. H. DAVID, of Bennettsville, S. C., writes: "After the extremely wet weather in July I top dressed my Cotton with Peruvian Guano, commencing the 1st of August. I am satisfied that I used Peruvian Guano, commencing at that late date. I expect to use Peruvian Guano extensively next year."
 Mr. J. F. THORNTON, of Bennettsville, S. C., writes: "I am more than pleased with the Peruvian Guano I used on my field this year as a side application, and I am satisfied that I made a third more Cotton where I used it, I shall use it again next year."
 Mr. B. E. MOORE, of Lester, S. C., one of the largest planters in Marlboro County says: "I made fine Cotton this year with Peruvian Guano alone. Did not use any on my corn. It is best not to mix it with Kainit; anyway, I received best results where I did not mix the two materials. Cotton Seed Meal and Peruvian Guano make a perfect fertilizer for Cotton on clay or stiff soils. Light or sandy soils need a little Kainit, or preferably Muriate of Potash, in addition. A little Nitrate of Soda as a top dressing is, of course, a good thing. I used Guano extensively this year and this is the first time my barns have failed to house the crops." (Mr. Moore has purchased for his own use and to sell over 1,000 tons of Peruvian Guano for delivery next February).
 Mr. W. M. SMITH, of Bennettsville, S. C., writes us: "I am so much pleased with the Peruvian Guano bought of you last May that I intend to use quite a quantity of it the coming year. Getting it so late in the season it did not have a fair show, I believe Peruvian Guano is a great fertilizer for Cotton; cheaper than any of like analysis being offered and of better quality."
 Mr. J. W. RICHARDSON, of Panama, S. C., writes: "In regard to Peruvian Guano I am very much pleased with the results, although I only used 136 lbs to the acre. Book up your order for next year's crop as usual."
 Mr. J. T. ROGERS, of Society Hill, S. C., writes: "I have used your Peruvian Guano as a side application to Corn and Cotton, and am very much pleased with results."
 Mr. C. A. MOORE, of Bennettsville, S. C., writes: "I wish to say that I used Peruvian Guano this year and am highly pleased with results, so much so that I give you my order for 20 tons. I think it is 'THE GUANO.'"
 Mr. A. H. SLOCOMB, of Fayetteville, N. C., writes: "Mr. J. A. King, of this place, has used Peruvian Guano for Garden Truck and obtained superior results to that from any other fertilizer. Mr. King is considered the best trucker in this vicinity, and his recommendation carries with it great weight."
 Mr. J. P. STEPHENS, of Myrtle, N. C., says: "The present condition of my crop would indicate that the Peruvian Guano used under it will give far better results than I have obtained from any of the manufactured fertilizers."
 Mr. F. S. McLOUDON, of Bennettsville, S. C., writes: "The Peruvian Guano gotten from you last June and applied as a side dressing in making the Cotton show up finely. It is a rich green color and growing and fruiting well. I used no Nitrate of Soda, and consider Peruvian Guano a fine substitute for it. The properties it contains are desirable to the development of the plant. I will use Guano again next year and can cheerfully recommend it as a complete natural manure."
 Mr. E. L. REIMS, of Darlington, S. C., says: "I put out 100 pounds of Peruvian Guano as a side application on 27 acres of Cotton, and am satisfied I made a great deal more Cotton than where I used 100 lbs of Nitrate of Soda that costs 50 per cent more than the Guano."
 Mr. R. C. TISDALE, of Sumter, S. C., writes: "I used Peruvian Guano this year as a side dressing, and it has been very satisfactory, coming up to every expectation, and I will use it next year about 400 pounds under the crop and 200 as a top dresser, and nothing else. I consider Peruvian Guano a complete, high grade manure."
 Mr. R. L. KIRKWOOD, of Bennettsville, S. C., writes: "I purchased one ton of your Peruvian Guano and was well pleased. I tested it mixed with other materials and alone. Owing to severe frosts in the latter part of June am unable to give you results as yet. My plan was to use it on my field, but was well pleased with results obtained where Guano was used in conjunction with other chemicals. I will give you a report on that field on 14 acres used with a special mixture of manure. On this 1 1/2 acres I had 1,500 lbs of special mixture analyzing 6 per cent Ammonia, 6 per cent Acid and 9 per cent Potash. I used 200 lbs of your Guano with the above and gathered from the plot 8,110 lbs of Seed Cotton. I am so well pleased with the Guano that I will use it extensively next year."
 Messrs LOHCK & LOWE, of Columbia, S. C., and our Agents in Richland county say: "We are very much pleased with the Guano we use since before the war. Our fathers used it, too, paying as high as \$100 a ton for it with a great deal of profit to them. Its superiority over manufactured fertilizers lies not only in its immediate results to present crops, but in the benefit to crops for four or five years to come. The broths of our Mr. Lowrance some years ago used \$22 worth of this Peruvian Guano to the acre on a 1/2 acre field. He made 37 bushels of Wheat to the acre on land that would not have made more than 5 or 6 bushels of Corn. Selling the Wheat at \$1.25 per bushel, he realized some \$40 per acre, or a clear profit of \$24 per acre. The land also showed the benefit of the application of this Guano for five years afterwards."
 Mr. EDWARD E. REMBERT, of Bennettsville, S. C., writes: "As soon as the 27th of Peruvian Guano arrived at Bennettsville, about June 1st, I ordered 5 tons of it along with Nitrate of Soda and Osepholite. It is the cheapest, results considered, and all that I could expect, and I intend to use Peruvian Guano for my entire crop the coming year in preference to all other fertilizers."

Do You want A GRAIN DRILL?
 If so, Get The Best.
 We sold in this County last season ELEVEN of the "Farmer's Favorite Grain Drills" and every one of them gave perfect satisfaction. We guarantee them to please. Read what some of our customers have to say:
 MR. P. A. HODGES, I am very much pleased with the "Farmer's Favorite Grain Drill" bought of you last season. I have planted my crops of Oats, Wheat, Peas and Sorghum Oats, and it has given me satisfaction. Where I have been planting Four Bu-shels Oats when sowed with hand, I find Two and a Half Bushels is sufficient when sowed with Drill.
 Signed J. E. BREEDEN.
 This is to certify that we planted our crop of small grain with the "Farmer's Favorite Grain Drill" last season and are pleased with it in every particular. We planted as much as six bushels Red Rust Proof Oats per acre, and in several instances it gave us a perfect stand, and has given entire satisfaction. We heartily recommend it.
 Signed T. S. and E. W. EVANS.
 MR. P. A. HODGES The "Farmer's Favorite Grain Drill" bought of you has given entire satisfaction, and I heartily recommend it.
 Signed J. C. HAMER.

See us if you Expect to Buy a DRILL, Very respectfully P. A. HODGES.
