

SUCCESS NEVER COMES WITHOUT AN EFFORT

Candidates Must Labor Unceasingly to Win—
Still Plenty of Subscriptions Left for You—
Don't Be Too Confident—Over-Confidence Has Lost Many Battles.

LET YOUR FRIENDS KNOW YOU ARE IN THE RACE TO STAY.

Now is the time for those interested in your campaign to rally around and put their shoulders to the wheel to send you on your way rejoicing. Did you ever stop to think what it will mean to be the winner of the Ford touring car? Look at the population of this city and the surrounding counties. The eyes of this great population are centered on this great enterprise. All are watching eagerly to see who will be the one that has mastered this great conflict. Since the beginning it has been a hard fought battle. Never was there a more even race. Nearly every candidate has friends organized to help her. In fact this has been like a great army, with each candidate as a general. Who will show who Anderson and the surrounding towns that they are the greatest masters? The next few days alone will tell.

Don't get cold feet, now that the race is nearly over. Always remember the old motto, "It is better to fail trying than not to try." Make up your mind that you will be the winner of the grand prize. Think of the delightful rides you will have this summer. Is there any greater pleasure in the world than having a car to step into just as the sun is going down, after a long hot day and spinning along in the cool of the evening with a party of congenial friends. If you spend even part of your time working industriously these last few days you can be the one to have this great pleasure this coming summer. And a great pleasure it will be—riding in your own car, won by your own individual efforts. Think about it.

Good Fertilizers

You can make better crops using our ready mixed goods than you can with your home mixed goods. In the first place in making your home mixed goods you get your ammonia from cotton seed meal, which is a good ammoniate, but it does not last long enough. About the time your cotton begins to fruit—take on bolls—your cotton seed meal is almost exhausted. So that just at the time when the strain is the greatest on the cotton plant and needs the greatest amount of plant food—the supply of plant food which you get from cotton seed meal is about exhausted and is rapidly growing weaker and the result is that your cotton sheds.

Now in getting our mixed goods, the ammonia is derived from Fish, Blood, Tankage, Cotton seed meal and Sulphate of Ammonia. As one of these ammoniates exhausts another comes in and takes its place, fish lasting longer than any. So that as one of these ammoniates gives out another comes in and your crop is supplied with plant food from the time it sprouts in the ground, all during the working season, all during the laying by season and until the crop is grown and ready to be gathered. Now if fish and blood and tankage and sulphate of ammonia are worth anything in a fertilizer, it makes a better fertilizer than when the ammonia is derived from cotton seed meal, only, and our fertilizer is better than your home mixed goods. If you put in the same ammoniates in your home mixed fertilizer that we put in ours it would cost you as much as ours will and it won't be as good for the simple reason that it won't be as well mixed. It won't run regular, and the crops grown from it won't be as regular.

They will be spotted, some good stalks, and some small stalks. It is the regular field of cotton where all the stalks are about the same size that turns off cotton at gathering time. The prospect now is that the next crop of cotton will bring a good price, so you want a good crop and don't want to take any chances in making a good crop. In using our goods ammoniated as they are you are not taking any chances, for you are getting the best fertilizer to be had and the only thing is to use enough of it. One or two more good crops at present prices and at prices which seem probable, will put a great many of you out of the woods. So it does not seem to be a good business to take any chances on making a good crop.

Suppose you make your home mixed goods, getting your ammonia from cotton seed meal at a dollar a ton cheaper than we can sell it to you for, and you use 400 pounds to the acre. A ton covers five acres, our goods will cost you twenty cents an acre more than your home mixed goods. Suppose your home mixed goods cost you 50 cents an acre and you use 400 pounds to the acre, our goods will cost you 50 cents an acre more than yours. The difference in the crops will be a great deal more than this. You can tell the difference in the crops in riding along the road. Good farmers who are close observers say that when they can tell the difference between two fields of cotton by riding along the road, the difference must be at least 300 pounds of lint cotton per acre means at present prices about \$12.00. Now you don't think it will pay to risk this, trying to save 20 or 40 cents an acre on your fertilizer bill, when it takes the same labor for both.

You won't make any mistake to use our 8-3-3 or 9-3-3 or 10-3-3 on your red lands and our 8-4-4 and 10-4-4 on your gray lands. Cotton was late opening this fall and there was quite a little cotton to be gathered after Christmas.

One advantage in using 10-3-3 and 10-4-4 is that this 10 per cent of Phosphoric acid hastens the maturity of the bolls. And when a cotton boll is grown, it will open, just as when a peach is grown, it will ripen, and when a watermelon is grown it will ripen.

There is nothing better than the goods made by

The Anderson Phosphate & Oil Company.

Financial and Commercial

New York Cotton

(By Associated Press.)

New York, March 4.—The cotton market today was less active and after starting at a low price for the season, showed steadier tones on covering and scattered buying for reaction.

There was nothing in the news to con-

firm yesterday's rumors of an easier spot situation, and the cables were about as due, but the opening here was 1 to 3 lower, under a renewal of scattering liquidation. Offerings were by no means active or aggressive, and prices rallied on straddle buying with old crop positions selling about 3 net.

Demand was less active after the close of Liverpool, with prices easing slightly under realizing. The close was steady, not 1 higher to 1 lower, except April, which was nominally 5 lower.

New Orleans Cotton

New Orleans, Mar. 4.—Buying of covers by shorts who wanted their profits was the main supporting influence in the cotton market today and it closed at a net gain of 5 to 10 points. The close was within a point or two of the highest.

Comment of the day was more bearish than otherwise. Bearish claims were chiefly in regard to grainful returns but attention was paid to the business and lower tendency in the spot markets.

In the early part of the session brokers had a large volume of selling orders to handle but these did not have much influence because of the demand from satisfied shorts. Buying by bulls was chiefly of the new crop positions, which were steady and well maintained at a small advance in the face of rains in Texas which were considered to be very favorable for farm work.

PLAN CHEROKEE FAIR

Gainesville, Mar. 4.—A definite move-

ment is on foot on the part of busi-

ness men of Gainesville to inaugurate a

county fair association, and while the

details have not as yet been all work-

ed out, there is no doubt that the as-

sociation will be formed. It is the

purpose of the promoters to com-

mence on a small scale and as the

patronage justifies to increase until

Cherokee will have one of the best

county fairs in the State. Several at-

tempts have before been made in

this direction, but they have lack-

ed system and energy, and as a con-

sequence have failed; but this move-

ment, which is to be based on

the right principles, holds every prom-

ise of success.

At the legal sales yesterday, only

one tract of land was sold, but the

other brought bids that Cherokee

real estate is very valuable. The
