OLD SOYTHES MADE USEFUL. -A. J. F. Howard writes: "Having, like almost every other farmer, a number of old scythes, some of which are not much worn, and having last winter a little leisure, I made some very useful and handy tools, and without any outlay. To make a bill hook I cut off 20 inches of the point of an old scythe, leaving 15 inches for the blade. The handle is made by cutting away the edge or blade part of the scythe, leaving the back, around which cloth was wound, until it was of sufficient size, when it was covered with leather. For a drawing knife, which I find useful in making handles to tools, etc., I use 24 inches of an old scythe, 12 inches for the blade, and 6 but their practical effect is not satisfactory. inches at each end for the handles. With a cold chisel I cut away the blade portion of the sevthe at the ends, and bent the back which can be done without heating. The handles may be made of cloth and leather, as for the bill hook, or of wood. A knife for paring apples, cutting turnip tops, and many other uses. This is made from the end of a scythe, 4 mches for the blade. 1 cut the back of the scythe entirely away, using only the thin part, then took a piece of wood-an old broom handle will doand with a fine saw I made a cut in the end to admit the end of the blade, which was fastened on by rivets. A chopping knife for cutting meat, apples, etc. For this knife I used 12 inches of the middle of a scythe, leaving 4 inches for the cutting surface in the centre of the piece. The 4

inches on each end had the blade removed. and were turned at right angles to the central portion, with the ends passing into a wooden handle." But very few tools are required in making the articles above described, and any farmer, during a rainy day or two, may construct them from an old scythe, and at no outlay of money.

THE AGE OF FOWLS .- If a hen's spur is hard and the scales on the legs rough, she is old whether you see her head or not, but her head will corroborate your observation. If the under bill is so stiff that you cannot bend it down, and the comb thick and rough, no matter how fat and plump, leave her for some one less particular. A young hen has the rudiments of spurs; the scale on the legs are smooth, glossy and fresh colored, whatever the color may be; the claws tender and short, the nails sharp, the under bill soft and the comb thin and smooth. An old hen turkey has rough scales on the legs, callosities on the soles of the feet, and long strong claws; a young one the reverse of all those marks. When the feathers are on the old turkey cock has a long tuft or beard; a young one but a sprouting one; and when they are off the smooth scales on the legs decide the point, besides the difference in the size of the wattles of the neck and in the elastic shoot upon the pose. An old goose, when alive, is known by the rough legs, the strength of the wings, particularly at the pinions, the thickness and strength of the bill, and the Then fineness of the feathers; and when plucked by the legs, the tenderness of the skin under the wings, by the pinions and bill, and the coarseness of the skin. Ducks are distinguished by the same means, but there is the difference that a duckling's bill is much longer in proportion to the breadth of its head than the old duck's.

If the beating is not stopped for a moment WHAT SIZE TREES TO BUY. -Purchasers the whole sauce will rise and be foamy as of trees often make the mistake of suppossea-froth. Flavor with wine, brandy or ing that the larger the tree bought the greater the gain. Nurserymen, who of all men should know as to this, say that there is absolutely nothing gained by buying large trees. This applies of course in a general sense. If a tree could be removed every few years, so as to have an abundance of fibrous, or small roots, there would be no check on removal, and such a tree would never become too large to move profitably. The general run of trees are not treated thus, and so, the larger the trees the less likely is it to have many roots, and as a consequence the tree must either be pruned back severely, or let alone to make a weak growth, and perhaps die. The best way is to get a medium tree, treat it well, and it will give far more satisfaction than a large be put on with a short-bristled brush, or,

MOTH KILLERS, --- The aromatic preservatives which have been used from time immemorial are of a character not at all destined to kill, but merely to annoy the pests. Camphor, pepper, naphtha, car-bolic acid, etc., are efficacious in preventing the moth laying its eggs within scenting distance of the odors, but none of these will destroy the eggs already laid or the larvæ developed from them. On the other hand, arsenic, alum, soaps, shaving powder, potash and common salt will usually kill the eggs in the incipient or primeval condition of transformation, and the larvae are also invariably exterminated by them. There are many kinds of mixtures used. The substances which hinder the laying of eggs are preferable, perhaps, to those which will kill the larve, on the principle that "an onnce of prevention is worth a pound of cure." It is the odorous substances, solely, which take effect upon the moth; coal tar, for instance. The most successful moth-destroying compound is stern parent, feeling for the young marnaphtha, a constituent of coal tar of a puntyr's hair. gent, dissgreeable odor. It evaporates slowly, and, used in ordinary quantities, is not injurious to the health. Neither is it injurious to the fabric to which it is applied. Naphtha, in its unvarnished condition, is one of the best extirpator known to entemological science, and can be suc-

cessfully used where other expedients fail. How TO BOIL AND STEW. --- To do either the food must be immersed at the beginning in actually boiding water, and the water must be allowed to reach the boiling point again immediately, and to boil for live minutes. The action of the boiling water upon the surface of either meat or vegetables is to harden it slightly, enough to prevent the escape of either juice or mineral salts. After the pot containing the food has begun to boil the second time, it

should be removed to the side of the fire and allowed to sin.mer until it is done. This simmering or stewing extracts all the nutricious qualities of either meat or vegetables. The pot should be kept closely covered unless for a moment when it is necessary to remove the scum. The steam will condense upon the inside of the cover, and fall back into the pot in drops of moisture. If the boiling is slow, do not think that rapid boiling cooks faster than the gentle process recommended. After the pot once boils you can not make its contents cook any faster if you have fire enough under it to run a steam engine. Remember if you boil meat hard and fast it will be tough and tastless, and most of

its goodness will go up the chimney or out the window with the steam.

TO MAKE CREAM SAUCE FOR PUDDING .-To make a bowlful of cream sauce take a piece of butter the size of a small egg and beat it up with powdered sugar until it is a light cream. Then set it aside, Then into a small tin saucepan put a coffee cupful of water, and add to at a teaspoonful of flour mixed in a little water. Cook this thoroughly until it is like thin starch. Then take up the butter and sugar mixture, and, while you are beating it energeticaly, let some one pour into it slowly and gradually the hot flour-sauce.

vanilla, as preferred. This is the best sauce made. Potato flour is sometimes used instead of wheat flour.

TO GIVE PINE AN OAK COLOR -- Wash the wood carefully in a solution of copperas dissolved in strong lye, in the proportion of a pound of copperas to a gallon of lye; when the wood is dry after having been thus thoroughly saturated with this wash, oit it, and it will look fresh and nice for a year or two, when it can be restrained and again oiled. Often, when not subjected to hard usage, the color will remain undimmed for several years, only requiring

Vegetine

Cured Her.

Cured Her. BELLEVUE, Ky. DR. H. R. STEVENS—DEAR Sur: I must state that your Vegetine deserves to be called a valuable blood purifier, renovator and Invigorator of the whole, system. My wile suffered for a length of time-with a scrofula sore on the leg. She took several bottles of Vegetine. The results were surprising; It cured her, while all the former remedles failed to give satisfaction. Respectfully, T. F. TRICK. I know the above to be true. HENRY WERTHMEIER, Druggist and Apothecary, 139 Monmouth St.

Vegetine—For gradicating all impurities of the blood from the system, it has no equal. It has never failed to effect a cure, giving tone and strength to the system debilitated by disease.

Vegetine. Purifies the Blood.

Bos N, Mass., Jan. 13, 1877. MR. H. R. STEVENS Dear Sir: I have been using Vegetine for some time with the greatest satisfaction, and can highly recommend it as a great cleanser and purifier of the blood. J. L. HANAFORD, Pastor of Egleston Square M. E. Church.

Nervousness, and all derangements of the nerv-ous system, are usually connected with a diseased condition of the blood. Debility is a frequent ac-companiment. The first thing to be done is to im-prove the condition of the blood. This is accom-plished by taking vegetine. It is a nerve medicine, and possesses a controlling power over the nerv-ous system.

Thousands Speak--Vegetine is acknowledged and recommended by physicians and apothecaries to be the best purifier and cleanser of the blood yet discovered, and thousands speak in its praise who have been restored to health.

Vegetine, Prepared by
