Phosphoric Acid which is in them.

The immense deposites of Phosphatic Guanos which were discovered in 1807 in South Carolina, by Dr. Pratt, consists mainly of Insoluble Phosphate of Lime, which is made available as a fertilizer by being ground to powder, and reduced by Sulphuric Acid to such a condition as to make ito insoluble phosphate soluble in water, and thus made capable of being taken up by growing plants. The insoluable Phosphate found in my commercial Fertilizer is of no more value to the plant than the original Phosphate rock. The greater the proportion of this soluble Phosphate which any Fertilizer contains, the less the quantity required per acre, and consequently the cheapest fertilizer is that containing the highest percentage of soluble Phosphate.

Impressed with these truths, the Sulphuric Acid and Super-phosphate Company have erected at Charleston the first extensive Acid Chambers South of Baltimore, and are able to offer to planters the Highest percentage of Soluble Phosphate of Lime known in the market.

Their Fertilizers are offered under two forms: Phosphoric Acid which is in them,
