This is to say, that we have had our Gins repaired by Bourdine's Gin Saw Gummer and find it to be superior to the hand saw mode of sharpening, it frees the saws from lint, especially when ginning damp cotton, and adds greatly to the sample and facilitates the gin in feeding more in the same time over the hand file. It restores the teeth to their original shape, making all alike, in doing so it leugthens the tooth as much as it is worn off at the point before needing repair again.
